

تعديلات الباحث اسماعيل

analysis presented in chapter four is solid and offers both quantitative and qualitative insights. still, the chapter could be strengthened by adding a short paragraph that clearly connects the statistical results to their practical implications within the logistics or construction sector depending on the study's context and It would also be helpful to explain how the identified statistical relationships particularly the role of artificial intelligence and its interaction with quality practices can lead to real improvements in cost, quality, time, and customer satisfaction.

such an addition would highlight the practical relevance of the findings and show more clearly how they support the study's objectives and address its research problem.

note: There is no need to resend the chapter after adding the comments.

good luck dr. Ismail
