

Step 3. Analyze the matrix and rearrange the tasks by means of sequencing algorithm to optimize information flows

- Find any empty rows and move them up
 - Empty row is a task that does not require any information from other tasks, making it ideal for first task
- Find any empty columns and move these to the end
 - Empty column is a task that does not produce any information required by other tasks, making it ideal for last task

	A	B	C	D	E	F	G	H	I	J	K	L
A			X									
B												
C		X										
D					X	X						X
E						X		X			X	
F		X							X			X
G		X									X	
H	X			X					X		X	
I						X				X		
J		X	X								X	X
K		X	X									
L	X								X	X	X	

Step 3. Analyze the matrix and rearrange the tasks by means of sequencing algorithm to optimize information flows

- Find any empty rows and move them up
 - Empty row is a task that does not require any information from other tasks, making it ideal for first task
- Find any empty columns and move these to the end
 - Empty column is a task that does not produce any information required by other tasks, making it ideal for last task

	A	B	C	D	E	F	G	H	I	J	K	L
A			X									
B												
C		X										
D					X	X						X
E						X		X			X	
F		X							X			X
G		X									X	
H	X			X					X		X	
I						X				X		
J		X	X								X	X
K		X	X									
L	X								X	X	X	

Step 3. Analyze the matrix and rearrange the tasks by means of sequencing algorithm to optimize information flows

- Find any empty rows and move them up
 - Empty row is a task that does not require any information from other tasks, making it ideal for first task
- Find any empty columns and move these to the end
 - Empty column is a task that does not produce any information required by other tasks, making it ideal for last task

	B	A	C	D	E	F	G	H	I	J	K	L
B												
A			X									
C	X											
D					X	X						X
E						X		X			X	
F	X								X			X
G	X										X	
H		X		X					X		X	
I						X				X		
J	X		X								X	X
K	X		X									
L		X							X	X	X	

Step 3. Analyze the matrix and rearrange the tasks by means of sequencing algorithm to optimize information flows

- Find any empty rows and move them up
- Empty row is a task that does not require any information from other tasks, making it ideal for first task
- Find any empty columns and move these to the end
- Empty column is a task that does not produce any information required by other tasks, making it ideal for last task

[illegible]

Step 3. Analyze the matrix and rearrange the tasks by means of sequencing algorithm to optimize information flows

- Find any empty rows and move them up
 - Empty row is a task that does not require any information from other tasks, making it ideal for first task
- Find any empty columns and move these to the end
 - Empty column is a task that does not produce any information required by other tasks, making it ideal for last task
- Find any information feedback loop, collapse it and schedule it as above as possible
- Repeat until all tasks and loops are sequenced (if possible)

[illegible]

Step 3. Analyze the matrix and rearrange the tasks by means of sequencing algorithm to optimize information flows

- Find any empty rows and move them up
- Empty row is a task that does not require any information from other tasks, making it ideal for first task
- Find any empty columns and move these to the end
- Empty column is a task that does not produce any information required by other tasks, making it ideal for last task
- Find any information feedback loop, collapse it and schedule it as above as possible
- Repeat until all tasks and loops are sequenced (if possible)

[illegible]

Step 3. Analyze the matrix and rearrange the tasks by means of sequencing algorithm to optimize information flows

- Find any empty rows and move them up
 - Empty row is a task that does not require any information from other tasks, making it ideal for first task
- Find any empty columns and move these to the end
 - Empty column is a task that does not produce any information required by other tasks, making it ideal for last task
- Find any information feedback loop, collapse it and schedule it as above as possible
- Repeat until all tasks and loops are sequenced (if possible)

	B	C	A	D	E	F	H	I	J	K	L	G
B												
C	X											
A		X										
D					X	X						X
E						X	X			X		
F	X							X				X
H			X	X				X		X		
I						X			X			
J	X	X								X		X
K	X	X									X	
L			X					X	X	X		
G	X									X		

Step 3. Analyze the matrix and rearrange the tasks by means of sequencing algorithm to optimize information flows

- Find any empty rows and move them up
 - Empty row is a task that does not require any information from other tasks, making it ideal for first task
- Find any empty columns and move these to the end
 - Empty column is a task that does not produce any information required by other tasks, making it ideal for last task
- Find any information feedback loop, collapse it and schedule it as above as possible
- Repeat until all tasks and loops are sequenced (if possible)

	B	C	A	L	D	E	F	H	I	J	K	G
B												
C	X											
A		X										
L			X						X	X	X	
D				X		X	X					
E						X	X				X	
F	X			X				X				
H			X		X				X		X	
I						X				X		
J	X	X		X							X	
K	X	X										X
G	X										X	

Step 3. Analyze the matrix and rearrange the tasks by means of sequencing algorithm to optimize information flows

- Find any empty rows and move them up
 - Empty row is a task that does not require any information from other tasks, making it ideal for first task
- Find any empty columns and move these to the end
 - Empty column is a task that does not produce any information required by other tasks, making it ideal for last task
- Find any information feedback loop, collapse it and schedule it as above as possible
- Repeat until all tasks and loops are sequenced (if possible)

	B	C	A	L	D	E	F	H	I	J	K	G
B												
C	X											
A		X										
L			X						X	X	X	
D				X		X	X					X
E						X	X				X	
F	X			X				X				X
H			X		X				X		X	
I						X				X		
J	X	X		X							X	
K	X	X										X
G	X										X	

Step 3. Analyze the matrix and rearrange the tasks by means of sequencing algorithm to optimize information flows

- Find any empty rows and move them up
 - Empty row is a task that does not require any information from other tasks, making it ideal for first task
- Find any empty columns and move these to the end
 - Empty column is a task that does not produce any information required by other tasks, making it ideal for last task
- Find any information feedback loop, collapse it and schedule it as above as possible
- Repeat until all tasks and loops are sequenced (if possible)

	B	C	A	K	L	D	E	F	H	I	J	G
B												
C	X											
A		X										
K	X	X										
L				X	X					X	X	
D					X		X	X				
E					X			X	X			
F	X				X					X		
H			X	X		X				X		
I								X			X	
J	X	X			X	X						
G	X				X							

Step 3. Analyze the matrix and rearrange the tasks by means of sequencing algorithm to optimize information flows

- Find any empty rows and move them up
 - Empty row is a task that does not require any information from other tasks, making it ideal for first task
- Find any empty columns and move these to the end
 - Empty column is a task that does not produce any information required by other tasks, making it ideal for last task
- Find any information feedback loop, collapse it and schedule it as above as possible
- Repeat until all tasks and loops are sequenced (if possible)

	B	C	A	K	L	D	E	F	H	I	J	G
B												
C	X											
A		X										
K	X	X										
L			X	X						X	X	
D					X		X	X				
E				X				X	X			
F	X				X					X		
H			X	X		X				X		
I								X			X	
J	X	X			X	X						
G	X				X							

Step 3. Analyze the matrix and rearrange the tasks by means of sequencing algorithm to optimize information flows

- Find any empty rows and move them up
 - Empty row is a task that does not require any information from other tasks, making it ideal for first task
- Find any empty columns and move these to the end
 - Empty column is a task that does not produce any information required by other tasks, making it ideal for last task
- Find any information feedback loop, collapse it and schedule it as above as possible
- Repeat until all tasks and loops are sequenced (if possible)

	B	C	A	K	J	L	D	E	F	H	I	G
B												
C	X											
A		X										
K	X	X										
J	X	X		X		X						
L			X	X	X						X	
D						X		X	X			
E				X					X	X		
F	X					X					X	
H			X	X			X				X	
I					X				X			
G	X			X								

And So on
