### Project risk management

#### Saudi Telecom Company

The Saudi Telecom Company faces a great risk such as security breaches and security concerns, this risk is considered one of the security risks that a solution must be found and not bypassed, and this risk is likely to occur as it is possible for the security breach to occur at any moment and when it does occur, the telecom company may fail to address. Therefore, all data is destroyed, STC follows steps to deal with, manage and reduce this risk by: Recruiting employees who examine and review the data and ensure that there are no gaps.

The second risk that the Saudi Telecom Company may face is the entry of new competitors and this line is widespread with any company, and this risk is considered to be highly influential because it is possible for customers to lose them and also to fail to achieve financial flows, so it is natural that this company implements a strategy to prevent the occurrence. This risk is through providing services at low prices to increase the number of customers.

The third risk is a decrease in the profit margin. This risk is considered one of the risks that the company may face and the possibility of its occurrence is mentioned that the company may face difficulties in attracting competencies, so the company's policy that it follows when it occurs is for the company to maintain and maintain the competencies is the real challenge for the company, especially as it has the best Competencies in the region, which is an old company that was able to be a suitable work environment for employees, and when we see bleeding in competencies, this is a scary thing.

Finally, the fourth risk is poor coordination between other departments. This matter is considered a risk because because of it the company may lose customers, and this matter may sometimes occur, which results from customer dissatisfaction and loss, so the company must follow a strategy to avoid this step and be by dividing employees into groups on. Their head is a responsible problem-solver in cooperation with groups.
