"Cybersecurity Enterprises Policies: A Comparative Study"

Article link :

<https://www.mdpi.com/1424-8220/22/2/538/pdf?version=1641902563>

Research Problem Statement : مشكلة الدراسة

The main research problem in the paper is

the lack of knowledge regarding common cybersecurity policy features across different industries.

The study highlights that while many resources exist for developing CS policies, little is known about the commonalities and best policies applicable across various business sectors.

Formulation Method: طريقة الصياغة

The research problem is formulated using the first method, where it is framed as two research questions:

RQ1: What are the aspects of cybersecurity that different enterprises have in common?

RQ2: How are the cybersecurity aspects used among different enterprises?

This question-based formulation helps guide the study in identifying key cybersecurity policy aspects and comparing their implementations across five industries (healthcare, finance, aviation, education, and e-commerce).

Evaluation of the Problem Statement: تقييم مشكلة البحث

Evaluation of the Problem Statement

Strengths:

The question format makes the research focus clear and easy to follow.
It aligns well with the study's objectives and findings.
It allows for a comparative analysis across industries.

Areas for Improvement:

The problem could be further strengthened by explicitly linking it to gaps in previous research.
Including a hypothesis-driven approach could provide testable predictions on CS policy effectiveness.
