Graduation Project 1

Research Questions:

- 1- What are the primary drivers behind the rapid development of Riyadh city?
- 2- How have urban planning policies influenced the growth and infrastructure of Riyadh?
- 3- What are the socioeconomic impacts of Riyadh's development on its communities and residents?
- 4- What challenges does Riyadh face in its development journey, especially regarding sustainability and inclusivity?

Research Objectives:

1. Identify the key factors driving the development of Riyadh city.
2. Please evaluate the effectiveness of urban planning policies that have been implemented to shape Riyadh's physical and social landscape.
3. Analyze the socioeconomic implications of Riyadh's development on its population and neighborhoods.
4. Propose strategies to address the challenges associated with Riyadh's development and foster sustainable growth.

Research Hypotheses:

1. Urban planning policies significantly contribute to Riyadh city's development and infrastructure.
2. Economic factors are crucial in influencing the pace and pattern of development in Riyadh.
3. Social dynamics impact the inclusivity and livability of Riyadh's neighborhoods.
4. Sustainable development practices are essential for the long-term prosperity and resilience of Riyadh city.

Research Model:

The research model may include variables related to urban planning policies, economic indicators, social factors, and sustainability measures. Statistical analyses such as regression or structural equation modeling could examine the relationships between these variables and Riyadh's development.

Suggested Industry/Organization for Empirical Study:

The Riyadh Municipality or relevant government agencies responsible for urban planning and development would be ideal partners for this empirical study. Additionally, collaboration with academic institutions and local community organizations could provide valuable insights into Riyadh's development's social and environmental aspects.

Research Methodology:

The research methodology could involve a combination of quantitative and qualitative approaches. Surveys and data analysis are quantitative methods that help identify statistical relationships between variables. In contrast, qualitative methods like interviews and case studies would provide deeper insights into Riyadh's development's socioeconomic and environmental dynamics.

Suggested Structure for the Project:

Introduction

Literature Review

Theoretical Framework

Methodology

Results and Analysis

Discussion

Conclusion and Recommendations
