Assignment 1 (Spring 2021)

Student Name.....Eman Abdullah Abalkhail اسم الطالب

Students I.D ...202123261..... الرقم الجامعي

Section

**Master of Project
Management**

Date

28 / 02 / 2021

Course Code

(PMG510)

Project Risk Management

This report aims to identify some risks that face Saudi Aramco company and how they may impact the company. One of the main risks is the demand risk of using oil, As we are moving forward to electric machines with less fuel and it would hardly affect the company's IPO and its prices which raise the second risk, which is risk premium. As a solution, Aramco will be shifting their work using more energy efficiency solutions as it is one of the Saudi Arabian 2030 visions. The third risk would be the climate changes as the rising sea level within the coming years may affect the refining facilities making it harder for the company to operate. The last risk is the operational risk, such as gas spills & oil leaks. The company took precautionary and preparatory measures to ensure the minimization of pollution from its operation.
