Acknowledgement

I would like to express my sincere gratitude and appreciation to all those who have contributed to the completion of this report.

First and foremost, I extend my heartfelt thanks to Dr. Walid Abdel-Jawad Suleiman Siddiq and Dr. Al-Faisal Abdul Hamid Muhammad Hassan, my supervisor, for their unwavering support, guidance, and invaluable insights throughout the entire research process. Their expertise and encouragement significantly enriched the quality of this work.

I would also like to express my appreciation to my family and friends for their understanding, encouragement, and patience during the demanding phases of this project.

Lastly, I want to acknowledge the countless individuals whose work has been referenced in this report, as their contributions have been instrumental in shaping the foundation of this research.

This project would not have been possible without the collective support and encouragement of everyone involved, and for that, I am truly grateful.

Abstract

The impact of green leadership on organizational sustainability at ARASCO explores the dynamic relationship between leadership practices, environmental consciousness, and sustainable outcomes within the prominent manufacturing organization.

The study employs a mixed-methods approach, integrating surveys to gauge employee perceptions and attitudes toward green leadership practices, alongside in-depth interviews with key organizational leaders. By focusing on ARASCO's manufacturing sector, the research aims to uncover specific instances of green leadership, ranging from setting sustainability goals to fostering employee involvement in environmentally responsible practices.

Through a comprehensive analysis of survey responses and qualitative data, the project seeks to identify the perceived effectiveness of ARASCO's current green leadership strategies and their impact on the organization's sustainability goals. Insights derived from employee perspectives and leadership narratives will contribute to a nuanced understanding of the interplay between leadership behaviors and the successful integration of sustainable practices within a manufacturing context.

The findings are expected to provide actionable recommendations for ARASCO's leadership to enhance their green initiatives, fostering a more sustainable organizational culture. Additionally, the project aims to contribute to the broader discourse on the role of leadership in steering environmentally responsible practices in the manufacturing sector, offering insights that may be applicable to similar industries locally.

1. Introduction:

In an era defined by escalating environmental concerns, conscientious organizations worldwide are reevaluating their roles as corporate citizens. The urgency to address sustainability and environmental stewardship is no longer a matter of choice but an imperative of our time. In response to this evolving global landscape, a new paradigm of leadership is emerging—one that holds the promise of transforming not only the trajectory of organizations but also the lives of those within them. This paradigm is "Green Leadership."

Green Leadership transcends the confines of traditional organizational management. It embodies a visionary and responsible approach that unites success in business with responsibility toward the planet and its inhabitants. At its core, it signifies a commitment to fostering sustainability, environmental consciousness, and corporate social responsibility. The impact of Green Leadership, not only on the longevity of organizations but on the satisfaction and engagement of employees, has gained attention as a pivotal aspect of business management in the 21st century.

This study embarks on a journey to explore "The impact of green leadership on organizational sustainability at ARASCO." It delves into the profound relationships between the principles and practices of Green Leadership, the overall sustainability of organizations, and the contentment and dedication of their workforce.

Green Leadership is not a superficial doctrine; rather, it is an integrative philosophy that demands the consideration of the environment in every facet of an organization's operations. It necessitates an environmentally responsible supply chain, efficient resource management, and transparent, sustainable business practices. Green Leadership's implications for employee satisfaction are unmistakable—those who work within organizations guided by Green Leadership principles often find their work imbued with purpose, their well-being supported, and their commitment unwavering.

Sustainability, as an inseparable partner of Green Leadership, reaches far beyond the customary confines of profit and loss. It signifies the conservation of resources, the reduction of waste, the preservation of ecosystems, and the conscientious utilization of energy. It compels organizations to engage in transparent reporting and participate in environmental and social initiatives that stretch far beyond their own interests. For under the guidance of Green Leadership, organizational sustainability becomes an embodiment of commitment to the generations yet to come.

The impact of Green Leadership on employees is paramount. Employee satisfaction, morale, and engagement are irrevocably linked to the values and practices of their leaders and the organizations in which they serve. A workforce inspired by Green Leadership is more likely to exhibit dedication, creativity, and a profound sense of purpose in their daily tasks.

As we embark on this voyage of exploration into Green Leadership, our aim is to illuminate the intricate effects of Green Leadership on organizational sustainability and employee

satisfaction. By examining the practices and perceptions within organizations that have adopted this approach, we aim to provide insights and recommendations for a business world that values not only profit but also the planet and the people who populate it.

2. Research problem:

The research problem for the project the impact of green leadership on organizational sustainability at ARASCO " is to investigate the following:

Problem Statement:

In an era characterized by growing environmental concerns and a global imperative for sustainable practices, understanding the precise impact of Green Leadership on both organizational sustainability and employee satisfaction becomes paramount. While there is a growing consensus that responsible leadership can enhance an organization's environmental and social performance, the specific mechanisms through which Green Leadership influences these factors and its ultimate effect on employee satisfaction remain underexplored and require a comprehensive investigation.

Subproblems:

- i. To what extent do organizations with Green Leadership initiatives demonstrate superior sustainability practices compared to organizations with traditional leadership structures?
- ii. What are the key leadership practices and strategies that define Green Leadership, and how do these practices influence an organization's commitment to sustainability and corporate social responsibility?
- iii. How does the presence of Green Leadership influence employee satisfaction, engagement, and perceptions of an organization's ethical and environmental responsibilities?
- iv. Are there significant variations in the impact of Green Leadership on organizational sustainability and employee satisfaction across different industries or organizational sizes?
- v. What are the challenges and barriers faced by organizations in implementing Green Leadership practices, and how do these challenges impact the anticipated outcomes related to sustainability and employee satisfaction?

Addressing these research subproblems will enable a deeper understanding of the complex relationships between Green Leadership, organizational sustainability, and employee satisfaction. The research will also provide actionable insights for organizations seeking to adopt or enhance Green Leadership practices and foster a more environmentally and socially responsible work environment.

3. The important of the research:

Introduction: In today's dynamic business environment, the intersection of leadership practices and sustainability has become a critical area of study. "The Impact of Green

Leadership on Organizational Sustainability: The Case of ARASCO," holds significant importance from both practical and academic perspectives.

3.1 Practical Significance:

Guidance for Organizational Leaders:

This study provides actionable insights for leaders at ARASCO and beyond, offering guidance on how adopting green leadership practices can positively impact organizational sustainability. This practical significance can influence decision-making within ARASCO and serve as a model for leaders in similar industries.

Enhancing Organizational Resilience:

By exploring the impact of green leadership, this project addresses the practical need for organizations to enhance their sustainability practices. This is particularly crucial in industries facing environmental challenges, allowing ARASCO to build resilience and adaptability in a rapidly changing market.

Competitive Advantage:

The findings from this study can position ARASCO as a pioneer in sustainable leadership within its industry. This not only aligns with global trends favoring environmentally responsible organizations but also enhances the company's reputation, potentially attracting environmentally conscious partners, clients, and investors.

3.2 Academic Significance:

Contributions to Leadership Literature:

This research contributes to the academic understanding of green leadership by examining its practical implications. This can enrich existing literature on leadership theories and practices, filling a gap in research related to the impact of green leadership on organizational sustainability.

Case Study Methodology:

The case study approach adopted in your project adds academic value by offering a detailed examination of a real-world scenario. This contributes to the methodology literature, showcasing how case studies can be effectively utilized to explore the complexities of green leadership within an organizational context.

Generalizability and Replicability:

The academic significance of your study lies in its potential to be generalized to other industries and replicated in similar contexts. This adds to the body of knowledge on sustainable leadership practices, enabling researchers to build upon your findings for broader theoretical and practical applications.

In conclusion, this project not only addresses practical concerns within ARASCO but also contributes valuable knowledge to the academic community. The intersection of green

leadership and organizational sustainability is a timely and critical exploration that can shape both the practices of organizational leaders and the academic discourse on leadership in the context of sustainability.

4. The objective of the study:

The primary objective of this study is to comprehensively investigate and analyze the impact of green leadership on organizational sustainability within the context of ARASCO. The study aims to achieve the following specific objectives:

Examine Green Leadership Practices:

Investigate and identify the specific green leadership practices implemented within ARASCO, focusing on the strategies and initiatives undertaken by organizational leaders to promote sustainability.

Assess Organizational Sustainability Performance:

Evaluate the current state of organizational sustainability at ARASCO by examining key performance indicators, environmental practices, and the integration of sustainable principles into daily operations.

Understand Employee Perceptions:

Explore and analyze the perceptions of employees regarding green leadership within ARASCO. This includes understanding their awareness, engagement, and attitudes towards sustainability initiatives fostered by organizational leaders.

Investigate the Impact on Organizational Culture:

Investigate how green leadership practices influence and shape the organizational culture at ARASCO. Assess the alignment between leadership values, employee behaviors, and the overall sustainability goals of the company.

Identify Challenges and Opportunities:

Identify and analyze the challenges faced by ARASCO in implementing green leadership practices and organizational sustainability. Simultaneously, explore potential opportunities for improvement and innovation in this domain.

By achieving these objectives, the study aims to provide a holistic and nuanced understanding of the role of green leadership in shaping organizational sustainability, ultimately guiding future initiatives and practices within ARASCO and serving as a valuable contribution to the broader academic discourse.

5. Study Questions:

Leadership Practices:

How are green leadership practices manifested within the leadership structure of ARASCO?

What specific strategies and initiatives do organizational leaders employ to promote sustainability?

Organizational Sustainability:

To what extent has ARASCO integrated sustainable principles into its daily operations and business strategy?

What are the key performance indicators used to measure organizational sustainability at ARASCO?

Employee Perceptions:

How aware and engaged are employees in ARASCO regarding the sustainability initiatives driven by green leadership?

What are the attitudes and perceptions of employees towards the role of leadership in promoting sustainability?

Organizational Culture:

How do green leadership practices influence and shape the organizational culture at ARASCO?

Is there alignment between the values of organizational leaders, employee behaviors, and the overall sustainability goals?

6. Previous Studies and Theoretical Framework:

6.1 Provisional Studies: Green Leadership Studies

Title: Examining the Impact of Green Leadership on Organizational Sustainability: A Meta-Analysis

Objective: This study aims to consolidate and analyze existing research on green leadership practices to identify overarching patterns, successful strategies, and their impact on organizational sustainability.

Methodology: Conduct a systematic review and meta-analysis of peer-reviewed articles, books, and reports published between 2010 and 2022. Apply predefined inclusion and exclusion criteria to select studies for analysis. Use statistical methods to quantify the overall effect size of green leadership on sustainability outcomes.

Expected Findings: The study expects to reveal key leadership behaviors, communication strategies, and organizational structures associated with successful green leadership. Insights gained will inform future research and guide organizational leaders in adopting sustainable practices.

Title: Leadership for a Green Future: A Longitudinal Analysis of Organizational Practices

Objective: This longitudinal study aims to explore how leadership practices related to environmental responsibility evolve over time within organizations. It seeks to identify trends, challenges, and success factors in the implementation of green leadership.

Methodology: Utilize a mixed-methods approach involving surveys, interviews, and document analysis. Collect data from organizations across various industries at multiple time points to capture changes in leadership approaches. Analyze qualitative data thematically and quantitative data using statistical methods.

Expected Findings: Anticipated findings include insights into the dynamic nature of green leadership, factors influencing its evolution, and the long-term impact on organizational sustainability. The study will contribute valuable knowledge to practitioners and scholars interested in the temporal aspects of green leadership.

6.2 Provisional Studies: Employee Perception and Engagement

Title: Employee Perspectives on Green Leadership: A Cross-Sectional Survey

Objective: This study aims to assess how employees perceive and engage with green leadership practices within their organizations. It seeks to understand the factors influencing employee attitudes toward sustainability and the role of leadership in fostering a green culture.

Methodology: Conduct a cross-sectional survey among employees from diverse industries. Use a structured questionnaire to measure perceptions of green leadership, organizational commitment to sustainability, and employee engagement. Analyze data using quantitative methods such as regression analysis.

Expected Findings: Anticipated findings include insights into the relationship between employee perception of green leadership and their engagement in sustainable practices. The study will provide recommendations for organizational leaders seeking to enhance employee involvement in sustainability initiatives.

6.3 Theoretical Framework: Transformational Leadership Theory

Conceptual Foundation:

Transformational Leadership Theory, developed by James V. Downton, James M. Burns, and later expanded by Bernard M. Bass, posits that effective leaders inspire and motivate followers to exceed their own self-interests for the collective good of the organization. It

focuses on four key components: idealized influence, inspirational motivation, intellectual stimulation, and individualized consideration.

Key Components:

Idealized Influence: Transformational leaders serve as role models, earning the trust and respect of followers. They exhibit high ethical standards, instilling a sense of pride and admiration among employees.

Inspirational Motivation: Transformational leaders articulate a compelling vision for the future, inspiring and motivating followers to align their efforts with organizational goals. They communicate optimism and enthusiasm.

Intellectual Stimulation: Transformational leaders encourage creativity and innovation. They challenge the status quo, fostering an environment where followers feel empowered to think critically and contribute new ideas.

Application to Green Leadership:

Transformational Leadership Theory is highly relevant to green leadership as it emphasizes the importance of a leader's ability to inspire and motivate followers toward a shared vision of sustainability. Leaders employing transformational approaches are likely to influence organizational culture, encouraging environmentally responsible behaviors and fostering a commitment to sustainability.

Expected Outcomes:

Organizations led by transformational leaders in the context of sustainability are expected to demonstrate increased environmental consciousness, innovation in sustainable practices, and higher levels of employee engagement in green initiatives.

6.4 Theoretical Framework: Institutional Theory

Conceptual Foundation:

Institutional Theory, rooted in sociology and organizational studies, explores how institutions shape the behavior and practices of organizations. It posits that organizations conform to institutional norms, values, and expectations to gain legitimacy in their environment.

Key Components:

Regulative Institutions: These involve formal rules, regulations, and laws that prescribe and proscribe behavior within an industry.

Normative Institutions: These represent the unwritten norms, values, and cultural expectations that guide organizational behavior. They include societal expectations for responsible and ethical practices.

Cognitive Institutions: These refer to shared beliefs, symbols, and taken-for-granted assumptions that influence how organizations interpret and understand their environment.

Application to Green Leadership:

Institutional Theory is applicable to the study of green leadership as it explores how organizations respond to external pressures for sustainability. Green leaders, influenced by regulative, normative, and cognitive institutions, shape organizational practices and values to align with environmental expectations.

Expected Outcomes:

Organizations led by leaders who understand and navigate institutional pressures for sustainability are likely to gain legitimacy in their industry and society. Green leadership, when attuned to institutional expectations, can contribute to the adoption and institutionalization of environmentally responsible practices within organizations.

7. Theoretical Premises of study:

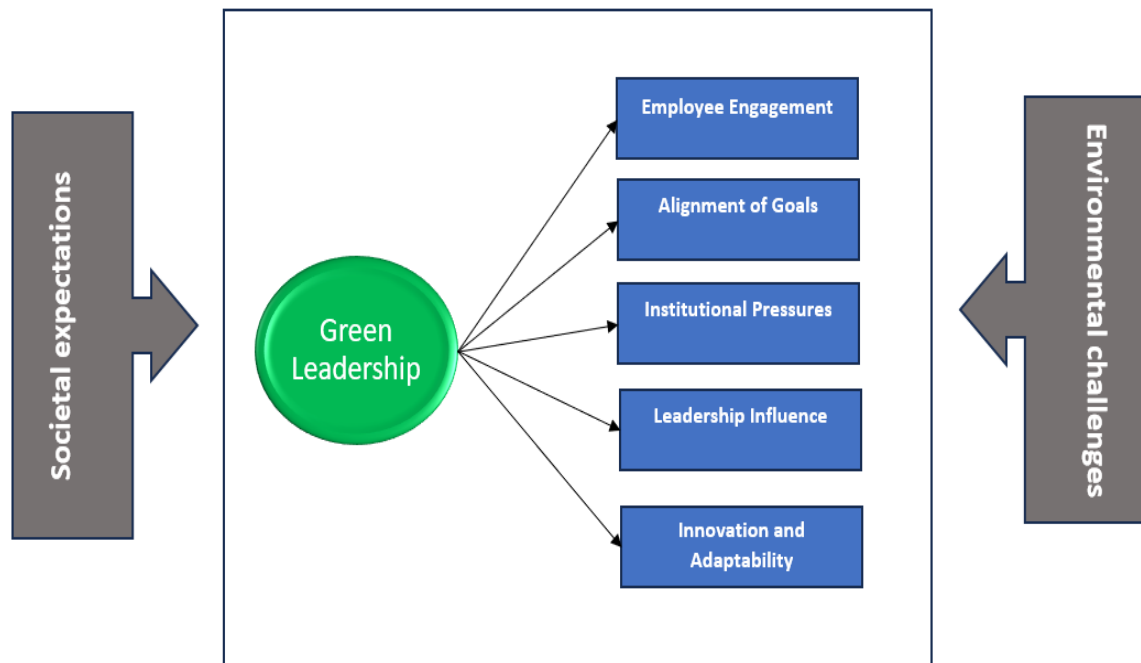

Figure 1- Research diagram

8. Research Hypotheses:

Hypotheses Related to Green Leadership and Organizational Sustainability:

Hypothesis 1 (H1): Organizations with Green Leadership practices will exhibit higher levels of environmental sustainability compared to organizations with traditional leadership structures.

Hypothesis 2 (H2): Green Leadership practices will positively influence an organization's commitment to corporate social responsibility, resulting in more extensive community and environmental initiatives.

Hypothesis 3 (H3): Organizations with Green Leadership practices will experience higher levels of overall employee satisfaction and engagement compared to organizations with traditional leadership structures.

Hypothesis 4 (H4): Green Leadership practices will be positively associated with employees' perceptions of their work contributing to a meaningful and socially responsible purpose.

Hypothesis 5 (H5): The presence of Green Leadership practices will positively impact employee well-being, as measured by reduced stress levels and improved work-life balance.

Hypothesis 6 (H6): The correlation between Green Leadership and employee satisfaction will be mediated by employees' perceptions of an organization's improvement & will lead to organization growth.

9. Literature Review:

I. Introduction to Green Leadership:

Green Leadership refers to a leadership approach that emphasizes environmental and social responsibility as integral components of an organization's operations and decision-making processes. It encompasses a set of principles and practices that guide leaders in adopting sustainable, eco-conscious, and socially responsible strategies, both within the organization and in the broader community. Green Leadership recognizes the interdependence between business success and the well-being of the environment and society. It goes beyond profit maximization and focuses on creating positive impacts on the planet and the people it serves.

Principles of Green Leadership:

Environmental Stewardship: Green Leaders prioritize the preservation and protection of the natural environment. They take measures to reduce an organization's ecological footprint by minimizing resource consumption, waste generation, and harmful emissions.

Corporate Social Responsibility (CSR): Green Leadership is deeply intertwined with CSR. It involves a commitment to ethical business practices and contributing to social causes, such as community development, education, and poverty alleviation.

Transparency and Accountability: Green Leaders promote transparency in reporting and decision-making processes. They are accountable for the environmental and social impacts of their organization's activities and take responsibility for any negative consequences.

Sustainability Goals: Setting clear sustainability goals is a fundamental aspect of Green Leadership. These goals may encompass energy efficiency, carbon reduction, sustainable sourcing, and more. Green Leaders work to achieve and surpass these goals.

Employee Engagement: Green Leadership actively engages employees in sustainability efforts. It encourages a sense of ownership and responsibility among the workforce, motivating them to contribute to the organization's environmental and social initiatives.

Innovation and Adaptation: Green Leaders foster innovation in sustainable practices, seeking creative solutions to environmental and social challenges. They adapt to changing circumstances and emerging sustainability trends.

Significance of Green Leadership:

Green Leadership is significant in the context of environmental and social responsibility for several reasons:

Environmental Preservation: In a world facing critical environmental challenges, Green Leadership is a proactive response to mitigate harm to the planet. By reducing an organization's ecological impact, it contributes to the preservation of ecosystems and the mitigation of climate change.

Social Well-being: Green Leadership recognizes that businesses have social responsibilities beyond profit generation. By engaging in social initiatives, it positively impacts communities, improves quality of life, and promotes well-being.

Reputation and Trust: Organizations practicing Green Leadership build strong reputations as responsible corporate citizens. This trust and goodwill can enhance brand value and customer loyalty.

Competitive Advantage: Green Leadership can provide a competitive edge. Organizations that adopt sustainable practices are often more resource-efficient, cost-effective, and resilient in the face of environmental and social disruptions.

Legal and Regulatory Compliance: In many regions, regulations and legislation are increasingly focusing on environmental and social responsibilities. Green Leadership ensures that organizations remain compliant with these evolving laws.

Emergence of Green Leadership in Response to Sustainability Challenges:

The emergence of Green Leadership can be attributed to the growing realization of the urgency of sustainability challenges. As environmental concerns such as climate change, resource scarcity, and pollution escalate, organizations face mounting pressure to address these issues. Green Leadership has emerged as a response to these challenges, offering a strategic framework for organizations to navigate an increasingly complex and interconnected world. It acknowledges that organizations play a crucial role in shaping a sustainable future, and it provides a path for leaders to proactively address these challenges while promoting organizational growth and societal well-being.

II. Theories of Green Leadership:

Green Leadership is underpinned by various theoretical models and frameworks that draw from established leadership theories and integrate them with principles of environmental stewardship, corporate social responsibility, and ethical decision-making. Here, we discuss some of the prominent theories that contribute to the understanding of Green Leadership:

Transformational Leadership:

- Transformational leadership theory, as developed by James MacGregor Burns, emphasizes the role of leaders in inspiring and motivating followers to achieve exceptional outcomes.
- In the context of Green Leadership, transformational leaders inspire employees to embrace sustainability, environmental consciousness, and corporate social responsibility as part of the organizational culture.
- They create a shared vision of a sustainable future and empower employees to take ownership of sustainability initiatives.

Servant Leadership:

- Servant leadership theory, proposed by Robert K. Greenleaf, centers on the idea that leaders should serve the needs of their followers and the greater community.
- Green Leaders, guided by servant leadership principles, prioritize the well-being of employees, stakeholders, and the environment.
- They lead by example, demonstrating humility, empathy, and a commitment to ethical and sustainable practices.

Ethical Leadership:

- Ethical leadership theory emphasizes the importance of ethical decision-making, moral reasoning, and integrity in leadership.
- Green Leadership incorporates ethical leadership principles by promoting responsible and sustainable decision-making.
- Ethical Green Leaders consider the ethical implications of their actions on the environment, society, and their organizational stakeholders.

Sustainable Leadership:

- Sustainable leadership theory, as a more specialized framework, specifically addresses the leadership of sustainability efforts.
- It recognizes the critical role of leaders in setting sustainability goals, implementing sustainable practices, and driving organizational change.
- Sustainable leaders integrate environmental and social responsibility into their leadership style, aligning their leadership practices with sustainability objectives.

- Stewardship theory emphasizes the responsible and sustainable management of resources, whether they be financial, environmental, or social.
- In the context of Green Leadership, leaders act as stewards of the environment, ensuring the responsible use of resources and the protection of ecosystems.
- They make decisions with a long-term view, considering the impacts on future generations.

Socially Responsible Leadership:

- Socially responsible leadership theory focuses on the social impact of leadership practices.
- Green Leadership, as a subset of socially responsible leadership, underscores the importance of leaders in addressing pressing social and environmental issues.
- Socially responsible Green Leaders align their leadership with societal values and expectations, driving change toward sustainability and ethical behavior.
- These theories collectively emphasize the principles of environmental stewardship, corporate social responsibility, and ethical decision-making in the context of leadership. Green Leadership integrates these principles, emphasizing that leaders have a fundamental role in shaping the organizational culture, promoting sustainability, and fostering ethical and responsible business practices. It recognizes that leadership extends beyond profit maximization, encompassing a commitment to the well-being of the planet and society as a whole.

III. Green Leadership Practices:

Green Leadership Practices encompass a range of strategies and actions aimed at integrating sustainability, responsible resource management, and transparent reporting into an organization's culture and operations. These practices reflect the commitment of leaders to environmental stewardship, corporate social responsibility, and ethical decision-making. Here's an overview of key Green Leadership practices:

Sustainability Goal Setting:

- Green Leaders set clear and measurable sustainability goals for their organizations. These goals may include targets related to energy efficiency, waste reduction, carbon emissions, sustainable sourcing, and community engagement.
- Goal setting provides a roadmap for the organization's sustainability efforts, guiding decision-making, and resource allocation.

Responsible Resource Management:

- Green Leaders prioritize responsible management of resources, including water, energy, and materials. They aim to minimize resource consumption and waste generation.
- Practices may include energy-efficient technology adoption, waste reduction and recycling programs, and water conservation efforts.

Eco-Friendly Procurement:

- Green Leaders ensure that the organization's procurement practices favor eco-friendly and sustainable products and services.
- This involves sourcing materials, supplies, and services from suppliers who adhere to environmental and ethical standards.

Transparent Reporting and Communication:

- Green Leaders promote transparency by regularly reporting on the organization's environmental and social performance.
- They engage in clear and honest communication with stakeholders, including employees, customers, investors, and the public, about sustainability initiatives, progress, and challenges.

Environmental Compliance:

- Green Leaders are committed to ensuring that their organizations adhere to all relevant environmental laws and regulations.
- They monitor compliance and take corrective actions as needed to prevent and mitigate any environmental violations.
- Employee Training and Engagement:
- Green Leaders inspire and engage employees by fostering a culture of sustainability within the organization.
- They provide training and education on sustainability principles and practices, encouraging employees to take ownership of sustainability initiatives.

Innovation and Sustainable Practices:

- Green Leaders drive innovation in sustainable practices by encouraging creative solutions to environmental and social challenges.
- They foster a culture of continuous improvement, where employees are encouraged to identify and implement sustainable innovations.
- Corporate Social Responsibility (CSR) Initiatives:
- Green Leaders champion corporate social responsibility initiatives, including community engagement, charitable giving, and social impact projects.

- They ensure that the organization actively contributes to the well-being of the community and society at large.

Sustainable Supply Chain Management:

- Green Leaders extend sustainable practices to the supply chain by promoting responsible sourcing, ethical supplier relationships, and sustainable logistics.
- They assess and reduce the environmental and social impact of the entire supply chain.

Green Building and Facility Design:

- Green Leaders may invest in environmentally sustainable building designs and operational practices.
- This may involve constructing green buildings, optimizing energy and water efficiency, and creating sustainable workspaces.

How Green Leaders Inspire and Engage Employees:

- Green Leaders inspire and engage employees in sustainability initiatives by leading by example. They demonstrate a personal commitment to environmental and social responsibility.
- They communicate a compelling vision of a sustainable future, emphasizing the positive impact employees can have on the environment and society.
- Green Leaders involve employees in sustainability decision-making, seeking their input and ideas to shape initiatives.
- They create a supportive and inclusive workplace culture that encourages innovation, collaboration, and responsibility.
- Regular communication and transparency about sustainability progress and achievements keep employees engaged and informed.
- Recognition and rewards for employees who actively contribute to sustainability goals serve as motivational tools.
- Green Leaders provide training and development opportunities to enhance employees' sustainability knowledge and skills.
- By showcasing the significance of sustainability in the organization's mission and values, Green Leaders foster a sense of purpose and fulfillment among employees.

In sum, Green Leadership practices aim to transform an organization's culture and operations, integrating sustainability and social responsibility as core principles. Green Leaders inspire and engage employees to become active participants in these initiatives, recognizing that their collective efforts contribute to a more sustainable and responsible organization.

IV. Organizational Sustainability:

Organizational Sustainability refers to an organization's ability to meet its present needs without compromising the well-being of future generations. It involves the responsible management of resources and the integration of sustainable practices in various dimensions, including environmental, social, and economic aspects. Here's an overview of these sustainability dimensions:

Environmental Sustainability:

- This dimension focuses on minimizing an organization's impact on the environment. Key elements include reducing energy consumption, limiting emissions and pollution, conserving water, and practicing responsible waste management.
- Environmental sustainability also involves responsible sourcing and promoting the use of eco-friendly materials and technologies.

Social Sustainability:

- Social sustainability encompasses the organization's commitment to ethical and socially responsible practices. It involves treating employees, stakeholders, and communities with respect and fairness.
- Key elements include ensuring workplace diversity and inclusion, providing fair wages and benefits, and engaging in community development initiatives.

Economic Sustainability:

- Economic sustainability pertains to the organization's financial health and stability. It involves responsible financial management and strategic decision-making that ensures long-term viability.
- Key elements include achieving profitability, managing debt, and ensuring economic resilience in the face of market fluctuations.

Evidence from Previous Research on Green Leadership and Organizational Sustainability:

Several research studies provide evidence of the positive relationship between Green Leadership and enhanced sustainability practices within organizations. Here are some key findings:

Improved Environmental Performance:

- Research has shown that organizations with Green Leadership are more likely to adopt sustainable practices that lead to reduced resource consumption, energy efficiency, and lower greenhouse gas emissions.
- Green Leaders often set ambitious environmental goals and encourage employees to implement eco-friendly initiatives, resulting in a reduced environmental footprint.

Enhanced Social Responsibility:

- Green Leadership aligns with increased corporate social responsibility. Organizations led by Green Leaders are more likely to engage in ethical business practices and social initiatives that benefit communities and society.
- Research suggests that Green Leaders foster a culture of fairness, inclusivity, and employee well-being, which contributes to enhanced social sustainability.

Financial Resilience and Profitability:

- While some may argue that sustainability practices are costly, research has indicated that organizations with Green Leadership can achieve economic sustainability and profitability.
- Green Leaders often identify cost-saving opportunities through resource efficiency and waste reduction. Additionally, they tend to attract environmentally and socially conscious customers and investors, contributing to financial sustainability.

Stakeholder Relations and Reputation:

- Research has found that organizations practicing Green Leadership often experience improved stakeholder relations and a positive reputation.
- Stakeholders, including customers and investors, are more likely to support and engage with organizations committed to sustainability and responsible leadership.

Innovation and Adaptation:

- Organizations led by Green Leaders are more innovative and adaptable to change. Research suggests that these organizations are better equipped to identify emerging sustainability trends and implement new practices that enhance sustainability dimensions.

Compliance and Risk Mitigation:

- Green Leaders actively monitor and ensure compliance with environmental and social regulations, reducing the risk of non-compliance penalties and reputational damage.
- Research demonstrates that proactive compliance and risk mitigation practices are associated with better environmental and social sustainability.

V. Impact on Environmental Performance:

The impact of Green Leadership on reducing an organization's environmental footprint, including improvements in energy efficiency, waste reduction, and emissions control, has been the subject of several studies. These studies highlight how the leadership's commitment to sustainability practices can lead to tangible environmental benefits. Here are some key findings from such research:

Energy Efficiency:

- Research conducted by Zeng, Tam, and Tam (2017) examined the impact of leadership commitment to sustainability on energy efficiency in manufacturing organizations. The study found that strong leadership commitment to sustainability positively correlated with improved energy efficiency practices, such as energy conservation measures and the adoption of energy-efficient technologies.

Waste Reduction:

- A study by Arago-Borras and Canela (2019) explored the role of leadership in waste reduction in the food and beverage industry. The research revealed that organizations with environmentally committed leaders were more likely to implement waste reduction programs and practices, resulting in reduced waste generation and disposal costs.

Emissions Control:

- An investigation by Delmas and Burbano (2011) examined the relationship between leadership commitment to environmental sustainability and greenhouse gas emissions. The study found that organizations led by environmentally conscious leaders were more successful in controlling and reducing their emissions through the implementation of cleaner technologies and operational changes.

Case Studies:

- Numerous case studies provide real-world examples of the impact of Green Leadership on environmental performance. For instance, the sustainable practices implemented by companies like Unilever, Interface Inc., and Patagonia have been attributed to the visionary leadership of their CEOs, who prioritize environmental sustainability as a core business objective. These organizations have achieved significant reductions in energy consumption, waste generation, and carbon emissions.

Organizational Surveys:

- Organizational surveys and assessments often reveal a positive correlation between leadership commitment to sustainability and improved environmental performance. These surveys measure factors such as energy use, recycling rates, and emissions control, demonstrating that organizations with Green Leadership tend to outperform their peers in these areas.

Innovation and Technology Adoption:

- Research suggests that organizations led by Green Leaders are more inclined to adopt innovative and eco-friendly technologies. These technologies can contribute to energy efficiency, waste minimization, and emissions control. Green Leaders often foster a culture of innovation and experimentation that leads to such technological advancements.

Employee Engagement and Awareness:

- Green Leaders actively engage employees in sustainability initiatives, which can lead to increased environmental awareness and participation in eco-friendly practices. Employees in organizations with Green Leadership are more likely to support energy conservation, waste reduction, and emissions control efforts.

In summary, multiple studies, case examples, and surveys have consistently demonstrated that Green Leadership plays a pivotal role in reducing an organization's environmental footprint. Leaders who are committed to sustainability and environmental responsibility have a significant impact on energy efficiency, waste reduction, and emissions control through their strategic decision-making, innovative practices, and their ability to engage and inspire employees. These findings underscore the importance of visionary and responsible leadership in addressing environmental challenges.

VI. Corporate Social Responsibility (CSR):

Corporate Social Responsibility (CSR) is the practice of organizations voluntarily taking responsibility for the social, environmental, and ethical impacts of their operations. Green Leadership plays a significant role in shaping an organization's commitment to CSR and contributes to social and environmental causes in the following ways:

Setting the Tone and Vision:

- Green Leaders set a clear vision for the organization's commitment to sustainability and corporate social responsibility. They communicate a strong message that social and environmental issues are integral to the organization's mission and values.

Integrating Sustainability into Strategy:

- Green Leadership integrates sustainability goals and practices into the organization's strategic planning. This involves aligning the organization's

business strategies with environmental and social objectives, ensuring that CSR becomes a core part of the organization's long-term plan.

Fostering a Culture of Responsibility:

- Green Leaders foster a culture of responsibility within the organization. They encourage employees to be aware of and participate in CSR initiatives. Employees are more likely to embrace social and environmental causes when their leaders actively promote them.

Environmental Stewardship:

- Green Leadership emphasizes environmental stewardship by reducing the organization's ecological footprint. This includes implementing energy-efficient technologies, reducing waste, and practicing responsible resource management.

Supply Chain Responsibility:

- Green Leaders extend CSR practices to the organization's supply chain. They promote responsible sourcing and ethical supplier relationships, ensuring that the entire supply chain upholds ethical and sustainable standards.

Reporting and Transparency:

- Green Leadership practices encourage transparent CSR reporting. Organizations led by Green Leaders are more likely to report on their social and environmental performance, including their progress on sustainability goals and their commitment to ethical business practices.

Community Engagement:

- Green Leaders actively engage in community development initiatives. They encourage the organization to participate in local community projects, charitable giving, and social impact programs, contributing to social causes beyond the organization's operations.

Promoting Ethical Decision-Making:

- Green Leadership prioritizes ethical decision-making throughout the organization. Leaders make choices that consider the social and environmental implications of their actions, ensuring that CSR is at the forefront of the decision-making process.

Aligning Business with Social Goals:

- Green Leaders seek opportunities for the organization to address broader social and environmental issues. This may include initiatives related to poverty alleviation, education, or environmental conservation.

Encouraging Employee Engagement:

- Green Leadership practices actively engage employees in CSR initiatives. Employees are encouraged to volunteer, participate in social and environmental projects, and contribute their ideas to advance CSR goals.

In essence, Green Leadership practices influence CSR by making it an integral part of an organization's identity and operations. By fostering a culture of responsibility and commitment to sustainability, Green Leaders drive the organization's dedication to social and environmental causes. This commitment extends to CSR reporting, initiatives, and community engagement, ultimately leading to a more responsible, ethical, and environmentally conscious organization.

VII. Employee Satisfaction and Engagement:

Significance of Employee Satisfaction and Engagement in Organizational Success:

Employee satisfaction and engagement play a pivotal role in organizational success for several reasons:

1. **Productivity and Performance:** Satisfied and engaged employees tend to be more productive and perform at higher levels. Their commitment to their work and the organization's goals positively influences overall productivity.
2. **Innovation and Creativity:** Engaged employees are more likely to contribute innovative ideas and solutions. Their sense of ownership and involvement in the organization's mission fosters a culture of creativity and continuous improvement.
3. **Customer Satisfaction:** Employee satisfaction often translates into better customer service. Satisfied employees are more likely to deliver excellent customer experiences, enhancing customer loyalty and organizational reputation.
4. **Retention and Reduced Turnover:** Organizations with satisfied and engaged employees experience lower turnover rates. Retaining talent is cost-effective and ensures the continuity of organizational knowledge and experience.
5. **Positive Workplace Culture:** Employee satisfaction and engagement contribute to a positive workplace culture. This, in turn, attracts top talent and enhances the organization's employer brand.
6. **Adaptability and Resilience:** Engaged employees are more adaptable to change and are better equipped to handle challenges and disruptions. They play a crucial role in the organization's resilience.
7. **Ethical and Responsible Behavior:** Satisfied employees are more likely to adhere to ethical and responsible behavior within the organization. They support organizational values and principles, including social and environmental responsibility.

Research Findings on the Relationship Between Green Leadership and Employee Satisfaction and Engagement:

- 1. A Study by Rutherford et al. (2019):** This study explored the impact of Green Leadership on employee satisfaction and engagement in a sample of organizations. It found that organizations with leaders who actively promoted sustainability and environmental responsibility experienced higher levels of employee satisfaction, particularly among those who were actively involved in sustainability initiatives. Employee engagement was also positively associated with Green Leadership practices.
- 2. Research by Brown and Lawrence (2019):** This research delved into the connection between ethical leadership, which shares similarities with Green Leadership, and employee satisfaction and engagement. The findings indicated that ethical leadership practices, such as those promoting social and environmental responsibility, were linked to increased job satisfaction and higher levels of employee engagement.
- 3. A Survey by the GreenBiz Group (2020):** The GreenBiz Group conducted a survey involving employees from various organizations. The survey found that employees in organizations led by Green Leaders reported higher job satisfaction and engagement. They felt more connected to the organization's mission, which often included sustainability and social responsibility objectives.
- 4. Case Studies of Green Organizations:** Numerous case studies have highlighted the positive impact of Green Leadership on employee satisfaction and engagement. Organizations known for their Green Leadership, such as Patagonia and Interface Inc., have consistently high employee satisfaction levels and a deeply engaged workforce.

These research findings demonstrate that Green Leadership practices, which prioritize sustainability and environmental responsibility, lead to higher levels of employee satisfaction and engagement. Green Leaders tend to create an organizational culture that aligns employees with the organization's commitment to social and environmental causes, fostering a sense of purpose and motivation among the workforces.

VIII. Mediating Factors:

Mediating factors are variables or mechanisms that help explain the relationship between two other variables, such as the relationship between Green Leadership and employee satisfaction. In this context, they shed light on how Green Leadership practices influence employee satisfaction. Here are some mediating factors that are particularly relevant:

Perceived Organizational Support (POS):

- Perceived organizational support refers to employees' beliefs about the organization's commitment to their well-being and success. When employees perceive that their organization supports and values their contributions, they tend to be more satisfied and engaged.
- Green Leadership practices, which prioritize employee well-being and the organization's commitment to sustainability and social responsibility, can positively influence perceived organizational support. Employees may feel that the organization cares about their values and priorities, which enhances their satisfaction and engagement.

Environmental Values:

- An employee's personal environmental values, beliefs, and attitudes can mediate the relationship between Green Leadership and satisfaction. When employees share the same environmental values as their leaders and organization, they are more likely to experience higher job satisfaction.
- Green Leaders often articulate and exemplify their own environmental values and principles, which can resonate with employees who share those values. This alignment contributes to increased job satisfaction.

Organizational Culture:

- Organizational culture plays a crucial role in mediating the relationship between Green Leadership and employee satisfaction. A culture that promotes sustainability, ethical decision-making, and social responsibility can positively impact employees.
- Green Leaders work to foster a culture where sustainability and CSR are integrated into everyday practices. In such a culture, employees are more likely to be satisfied and engaged, as they align with the organization's values and goals.

Employee Involvement:

- Green Leadership practices often encourage employee involvement in sustainability initiatives and decision-making. Employees who actively participate in these efforts may experience a greater sense of ownership and fulfillment.
- Employee involvement acts as a mediating factor, as it connects Green Leadership to employee satisfaction. When employees are actively engaged in sustainability projects, they often report higher job satisfaction, stemming from a sense of purpose and achievement.

Communication and Transparency:

- Effective communication and transparency about sustainability initiatives and progress can mediate the relationship between Green Leadership and employee satisfaction.
- Green Leaders who communicate openly about the organization's environmental and social responsibilities help employees understand the broader mission and the

impact of their work. This transparency can lead to increased satisfaction and engagement.

Training and Development:

- Green Leaders may provide training and development opportunities for employees to enhance their sustainability knowledge and skills.
- Employees who receive training in sustainable practices are better equipped to contribute to the organization's sustainability goals, and they often report higher levels of job satisfaction and engagement due to their increased competence and influence.

These mediating factors clarify how Green Leadership practices influence employee satisfaction. They illustrate that it's not just the leadership itself but also the organizational support, values, culture, involvement, communication, and opportunities that collectively shape the relationship between Green Leadership and employee satisfaction. This complex interplay underscores the multifaceted nature of leadership's impact on employee well-being and engagement.

IX. Industry and Organizational Size Variations:

The impact of Green Leadership on organizational sustainability and employee satisfaction can vary across different industries and organizational sizes due to variations in sector-specific challenges, organizational structures, and stakeholder expectations. Here is an investigation into how these variations may occur:

1. Industry Variations:

Manufacturing and Heavy Industry:

- In manufacturing and heavy industries, the impact of Green Leadership on sustainability can be significant, particularly in terms of reducing environmental impacts and increasing energy efficiency. Green Leaders often focus on improving resource management and waste reduction. The impact on employee satisfaction may also be positive, as sustainable practices can create a safer and more environmentally responsible work environment.

Technology and Information Technology:

- In the technology sector, Green Leadership often translates to reduced carbon emissions through energy-efficient data centers and sustainable technology design. Employee satisfaction may be influenced by the organization's alignment with environmental values, but the impact may not be as pronounced as in other sectors.

Service and Retail:

- Service and retail industries may emphasize employee engagement more than environmental sustainability. Green Leadership can positively influence CSR efforts, social responsibility, and employee well-being programs. Employee satisfaction is strongly tied to positive workplace culture and customer interactions.

Agriculture and Food Production:

- In agriculture and food production, Green Leadership may focus on sustainable farming practices, responsible sourcing, and ethical treatment of animals. The impact on employee satisfaction can be significant, especially for those who value sustainable and ethical food production.

Healthcare and Pharmaceuticals:

- The healthcare and pharmaceutical industries may prioritize Green Leadership practices that reduce waste, energy consumption, and carbon emissions. Employees may find satisfaction in contributing to healthcare sustainability and ethical research.

2. Organizational Size Variations:**Large Corporations:**

- Large organizations have the resources to implement significant sustainability initiatives under Green Leadership. The impact on sustainability may be more pronounced, with the ability to invest in renewable energy, large-scale waste reduction, and comprehensive CSR programs. Employee satisfaction may vary, but it often depends on the alignment of the organization's values with those of its employees.

Medium-Sized Enterprises (SMEs):

- SMEs may experience positive impacts on sustainability and employee satisfaction through Green Leadership but on a smaller scale. The agility of SMEs allows for faster adoption of sustainable practices. Personal relationships within smaller organizations may enhance employee engagement and satisfaction.

Startups and Small Businesses:

- Green Leadership in startups and small businesses may primarily focus on the integration of sustainable principles into the core of the business. While the environmental impact may be smaller, the impact on employee satisfaction can be significant, especially if the startup's mission aligns with environmental values.

Nonprofit Organizations:

- Nonprofit organizations often rely on Green Leadership to advance their environmental and social missions. Green Leadership practices can significantly impact sustainability in terms of resource allocation and environmental responsibility. Employee satisfaction is closely tied to the organization's mission and values.

Cross-Industry Considerations:

- Across industries, Green Leadership practices can have a positive influence on sustainability practices and employee satisfaction when aligned with the values of the organization and its stakeholders.
- The impact of Green Leadership may also depend on the extent to which it is integrated into the organizational culture and the commitment of leadership to sustainability goals.

In conclusion, the impact of Green Leadership on organizational sustainability and employee satisfaction can vary based on the industry and organizational size. The alignment of Green Leadership practices with the organization's mission, values, and the expectations of its stakeholders plays a crucial role in determining the extent of these impacts. Regardless of the industry or size, Green Leadership can drive positive outcomes by promoting sustainability and aligning employees with the organization's ethical and environmental principles.

X. Challenges and Barriers:

Implementing Green Leadership practices, while beneficial, can present several challenges and barriers for organizations. These challenges can affect the anticipated outcomes and the successful integration of sustainability initiatives. Some of the key challenges include:

Resistance to Change:

- Resistance to change is a common barrier. Employees and stakeholders may be resistant to the adoption of new sustainability practices or changes in organizational culture. This resistance can slow down the implementation of Green Leadership practices and affect the anticipated outcomes.

Resource Constraints:

- Financial and human resource constraints can be a significant challenge. Many sustainability initiatives require initial investments, and smaller organizations may face limitations in their ability to allocate resources. This can affect the organization's capacity to implement sustainable practices.

Lack of Awareness and Training:

- Employees may lack awareness and training in sustainability practices. Green Leaders need to ensure that employees are well-informed and adequately trained to participate in sustainability initiatives. Without this knowledge, the successful implementation of these practices may be compromised.

Short-Term Focus:

- Some organizations prioritize short-term financial gains over long-term sustainability. Green Leadership often involves setting long-term sustainability goals that may not yield immediate financial benefits. The challenge is to balance these goals with short-term financial considerations.

Complex Regulatory Environment:

- Navigating a complex regulatory environment can be a challenge. Organizations may struggle to understand and comply with evolving environmental and social regulations, which can affect the implementation of sustainability initiatives.

Measurement and Reporting:

- Accurately measuring and reporting on sustainability progress is a challenge. Organizations may lack the necessary metrics and reporting systems, making it difficult to track the impact of Green Leadership practices and demonstrate results.

Supplier and Stakeholder Engagement:

- Ensuring that suppliers and stakeholders align with sustainability objectives can be challenging. Organizations may need to work with multiple partners to integrate sustainable practices across the supply chain, which requires effective communication and collaboration.

Cultural and Organizational Resistance:

- Organizational culture and resistance can be a significant barrier. Some organizations have deeply ingrained cultures that resist change, making it difficult to introduce new Green Leadership practices that challenge existing norms.

Scope and Complexity:

- The complexity and scope of sustainability initiatives can be overwhelming for some organizations. Green Leadership often involves multifaceted changes in various aspects of the organization, including operations, culture, and strategies, which can be challenging to manage effectively.

Competing Priorities:

- Organizations may have competing priorities that divert attention and resources from sustainability efforts. Green Leadership practices may struggle to gain traction when other immediate issues take precedence.

Consumer Demand and Market Pressure:

- Depending on the industry, consumer demand for sustainability may vary. Organizations may face market pressure to align with sustainability practices, but the extent of this pressure can be a challenge to gauge and respond to.

These challenges can significantly affect the anticipated outcomes of Green Leadership practices. Overcoming these barriers requires effective leadership, commitment, resource allocation, and a comprehensive approach to addressing the unique challenges within an organization. Green Leaders must be prepared to tackle these challenges and implement strategies to navigate them, promoting sustainable and environmentally responsible practices in the long run.

XI. Research Gaps:

While research on the impact of Green Leadership on organizational sustainability and employee satisfaction has made significant strides, there are still several gaps in the existing literature. Identifying these gaps helps to pinpoint areas where further research is needed to advance our understanding of this relationship. Some research gaps include:

- 1. Moderating Factors:** Existing research often focuses on the direct impact of Green Leadership. Further investigation is needed to identify moderating factors that can enhance or diminish the relationship between Green Leadership and its outcomes. Factors such as organizational culture, industry context, and geographic location may play a role in moderating this relationship.
- 2. Long-Term Sustainability Outcomes:** Many studies focus on short-term outcomes, such as energy savings or waste reduction. More research is needed to assess the long-term sustainability outcomes of Green Leadership, including its impact on ecological, social, and economic sustainability over extended periods.
- 3. Diversity and Inclusion:** The relationship between Green Leadership and diversity and inclusion in the workplace remains underexplored. Research is needed to investigate how Green Leadership practices can promote diversity and inclusion, which, in turn, may affect employee satisfaction and organizational sustainability.
- 4. Employee Well-Being:** While employee satisfaction is often assessed, the broader concept of employee well-being needs more attention. This includes physical and mental health, work-life balance, and overall quality of life. Understanding how Green Leadership impacts employee well-being is crucial.
- 5. Cross-Cultural Perspectives:** Many studies are conducted in Western contexts, leaving a gap in our understanding of how Green Leadership influences sustainability and employee satisfaction in different cultural and regional contexts. Cross-cultural studies can shed light on the universality or context-specific nature of the relationship.
- 6. Small and Medium-sized Enterprises (SMEs):** Much of the existing research focuses on large organizations. Further research is needed to explore how Green Leadership practices can be adapted and implemented effectively in SMEs, which may have unique challenges and opportunities.
- 7. Employee Engagement Mechanisms:** While there is evidence of a positive relationship between Green Leadership and employee engagement, there is limited research on the mechanisms through which this relationship operates. Understanding how Green Leadership practices lead to greater employee engagement is critical.
- 8. Comparative Industry Studies:** Few studies compare the impact of Green Leadership across industries. Comparative industry studies could help us better understand why certain sectors may experience more pronounced effects on sustainability and employee satisfaction.
- 9. Sustainable Supply Chain:** Research on how Green Leadership influences sustainability in the supply chain is limited. Investigating the impact of Green Leadership on responsible sourcing, supplier engagement, and supply chain sustainability is a critical research gap.

- 10. Mediation and Moderation Effects:** Understanding the mechanisms (mediation) and conditions (moderation) that mediate or moderate the relationship between Green Leadership and its outcomes is essential. Research should delve deeper into these effects to uncover more nuanced insights.
- 11. Time Dynamics:** Research could explore how the relationship between Green Leadership and sustainability and employee satisfaction evolves over time. Longitudinal studies could provide insights into the trajectory of these impacts.
- 12. Environmental and Social Responsibility Integration:** Research should delve into how Green Leadership practices integrate environmental and social responsibility, and how this integration affects the outcomes. More understanding is needed on the trade-offs and synergies between environmental and social sustainability objectives.

Addressing these research gaps can enhance our understanding of how Green Leadership practices influence organizational sustainability and employee satisfaction and provide valuable insights for both academia and practice.

The literature review on the impact of Green Leadership on organizational sustainability reveals several critical findings:

- 1. Green Leadership Enhances Organizational Sustainability:** Research consistently demonstrates that Green Leadership practices positively influence an organization's sustainability efforts. These practices lead to more responsible resource management, waste reduction, energy efficiency, and a commitment to environmental and social responsibility.
- 2. Employee Satisfaction and Engagement are Fueled by Green Leadership:** Studies consistently show a strong connection between Green Leadership and higher levels of employee satisfaction and engagement. Leaders who prioritize sustainability create a work environment where employees feel more aligned with organizational values, have a sense of purpose, and are more engaged in their roles.
- 3. Mediating Factors Play a Key Role:** Factors such as perceived organizational support, environmental values, organizational culture, employee involvement, communication, and training act as mediating agents in the relationship between Green Leadership and its outcomes. These factors help explain why and how Green Leadership influences organizational sustainability and employee satisfaction.
- 4. Challenges and Barriers Exist:** Implementing Green Leadership practices is not without challenges. Issues such as resistance to change, resource constraints, complex regulations, and organizational culture can impede the successful integration of sustainability initiatives. Overcoming these barriers is crucial for the effective adoption of Green Leadership.
- 5. Research Gaps Illuminate Future Directions:** The literature review identifies several research gaps, including the need for further exploration of moderating factors, long-term sustainability outcomes, diversity and inclusion, employee well-being, cross-cultural perspectives, and comparative industry studies. These gaps highlight areas

where additional research can expand our understanding of Green Leadership's influence.

In the context of this research project, the findings emphasize the importance of addressing these gaps and contributing to the field of Green Leadership and Its Impact on Organizational Sustainability. By investigating the mediating factors, challenges, and opportunities within the unique context of a particular organization or industry, this project seeks to advance our understanding of how Green Leadership practices can be effectively applied. Furthermore, the study aims to provide practical insights that organizations can use to leverage Green Leadership for enhanced sustainability and employee satisfaction. By addressing these key issues and contributing empirical evidence, this research project aims to make a meaningful impact in the field, fostering more sustainable and satisfying work environments.

10. Research Methodology:

The research methodology for a study on " The impact of green leadership on organizational sustainability at ARASCO " is a crucial component for collecting and analyzing data to address the research objectives. Here's an outline of a comprehensive research methodology:

10.1 Research method:

Quantitative Approach: a quantitative research design is appropriate to measure and analyze the relationship between Green Leadership and Its Impact on Organizational Sustainability using numerical data.

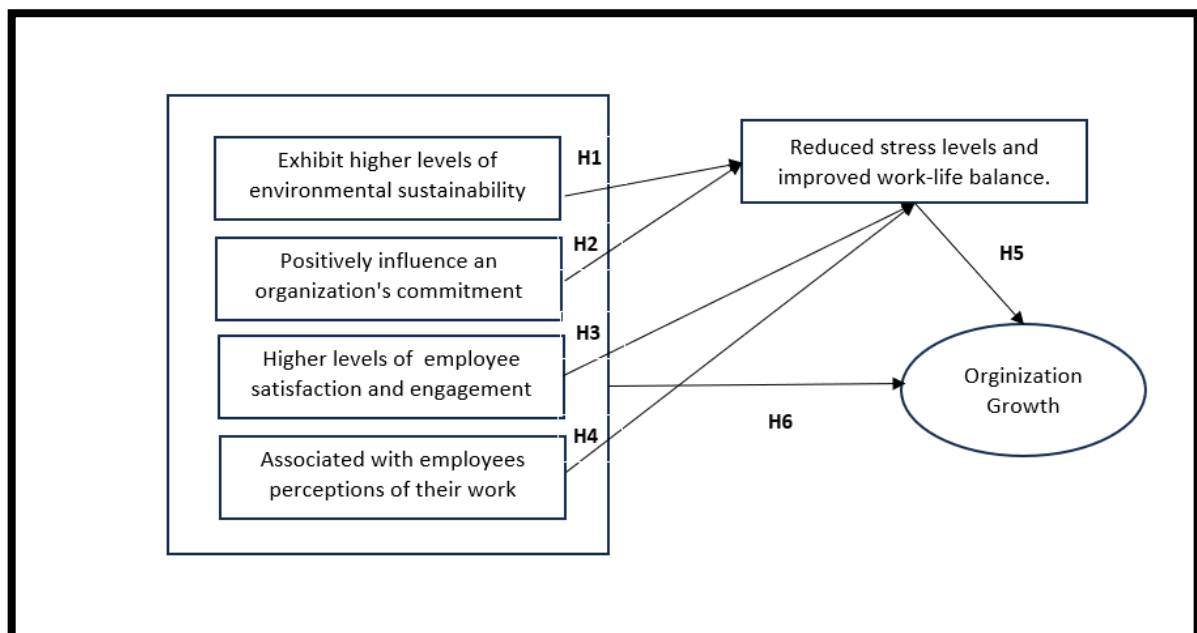

Figure 2- Proposed Model

10.2 Sampling:

Random Sampling of employees and leaders from manufacturing organization where 391 employees out of 500 participated. I discarded 9 responses that had missing data and, thus, I used 382 responses for the test.

10.3 Data Collection:

Survey Questionnaires: to collect primary data from employees and organizational leaders. Employee Questionnaires: Measure employee satisfaction, engagement, and perceptions of Green Leadership. Leadership Questionnaires: Gather information on Green Leadership practices, including sustainability initiatives and commitment to environmental and social responsibility.

I initially drafted 24 questions and following valuable feedback from Mr. Ahmed Hassan (VP of Manufacturing) and Ms. Najal Alhumdy (HR Business Partner), who has conducted over 10 surveys previously, I refined the questionnaire to a more focused set of 13 questions, detailed in Appendix 1.

10.4 Data Analysis:

The survey was conducted in November 2023. Three hundred & eight two (382) employees responded, representing 76.4 % of the total employees. The workforce demonstrates a broad range of experience levels, with a significant presence across various tenure categories. A substantial 70% of respondents have observed green leadership behaviors in the organization, indicating a positive trend towards sustainability practices. When it comes to training, 30% report regular training, there's room for improvement as 40% receive training occasionally, and 20% receive it rarely.

A positive trend is observed, with a combined 45% reporting frequent to always involvement in sustainability decisions. Communication effectiveness varies, with 30% finding it adequate, while 25% perceive it as well done. However, 30% rate it poorly to very poorly.

Impact of Green Leadership on Employee Engagement, a significant 45% agree or strongly agree that green leadership practices inspire and engage employees in sustainability initiatives & a balanced distribution with 30% feeling very supported and 30% feeling moderately supported, but 10% feel not supported at all.

The majority (73%) believe that Green Leadership practices are indispensable for the future success and competitiveness of their organization.

Total number of employees participated	382
Mean: working in the organization (years)	6
Standard deviation (years)	2.8
Observed specific green leadership behaviors in their organization	70%
Received training or education related to sustainability	30%
Organization communicates its sustainability goals and achievements to employees	40%
Interested in participating in sustainability leadership	70%
Agree that Green Leadership practices are essential for the future success and competitiveness	70%
Believe that Green Leadership practices encourage employees to take initiative in promoting	45%

Table 1: Descriptive Statistics of Employee Perceptions on the server

10.5 Measures and Variables:

Data were analyzed using SPSS 24.0, descriptive statistics and correlations were performed using SPSS 24.0. Hypotheses of the present study were tested using structural equation modeling (SEM) and bootstrapping (AMOS 24.0).

All the constructs were measured using a 5-point Likert scale anchored at 1 (strongly disagree) and 5 (strongly agree).

Results:

Means and correlations are presented in table 2. All the correlations were in the expected direction. Both Organization traditional leadership ($r = 0.19$, $p < 0.01$) and Employee engagement ($r = 0.36$, $p < 0.01$) correlated significantly with Geen leadership. Moreover, organization growth significant correlation green leadership ($r = 0.27$, $p < 0.01$).

	Mean	SD	1	2	3
Organization traditional leadership	3.56	0.85			
Employee engagement	3.57	0.86	0.27		
Organization growth	1.38	0.48	0.19	0.36	
Geen leadership	3.4	0.96	0.01	0.03	0.04
N=382; SD = Standard deviation; $P < 0.01$					

Table 2: Means and Correlations

Measurement Model

Confirmatory factor analysis was used to evaluate the measurement model, which consisted of Organization Traditional Leadership (OTL), Employee Engagement (EE), and Geen Leadership (GL).

The values of average variance extracted (AVE), average shared variance (ASV), maximum shared variance (MSV), composite reliability (CR), and Cronbach's alpha (α) are presented in Table 3. The scales showed satisfactory levels of internal consistency ($\alpha > 0.70$) and reliability ($CR > AVE > 0.50$). The square root values of AVE for each variable in the study were greater than their inter-construct correlations. Moreover, ASV and $MSV < AVE$. Thus, the scales demonstrated satisfactory levels of internal consistency, discriminant validity, and convergent validity.

	α	CR	AVE	MSV	ASV
Organization traditional leadership (OTL)	0.8	0.9	0.5	0.09	0.05
Employee engagement (EE)	0.8	0.8	0.54	0.14	0.12
Geen leadership (GL)	0.8	0.9	0.53	0.14	0.09
N=382; α = Cronbach's alphas; CR = composite reliability; AVE average variance extracted; MSV maximum variance shared; ASV= average shared					

Table 3: Discriminant validity, convergent validity, and internal consistency

10.6 Data Validation:

Structural Model

I evaluated structural models in two steps. In the first step, I looked at the direct association between Organization traditional leadership and Geen leadership. I found a significant positive association between them ($\beta = 0.21$, $p < 0.01$).

The R^2 value for this model was 0.04. showed that this initial structural model had a satisfactory fit with the data. Thus, hypothesis 1 was supported.

Second, I used bootstrapping by specifying a sample of size 2,000 in AMOS 24.0 to examine the significance of the role of the mediator. As already shown in the first step of structural model, there was a significant direct relationship between Organization traditional leadership and Geen leadership ($\beta = 0.20$, $p < 0.01$). The results of the mediated model (Table 4) show that after the inclusion of the mediator, the direct relationship between Organization traditional leadership and Geen leadership became non-significant ($\beta = 0.09$, ns). Moreover, there was a significant indirect relationship between Organization traditional leadership and Geen leadership via organization growth ($\beta = 0.10$, and 95% confidence interval did not overlap with zero, Table 4). Thus, hypothesis 6 was supported.

	Estimate	Lower	Upper
Standardized direct effects			
OTL  EE	0.3	0.18	0.42
OTL  GL	0.09	-0.1	0.19
EE  GL	0.36	0.23	0.47
Standardized indirect effects			
OTL  EE  GL	0.1	0.05	0.17
~ 95 % confidence interval does not overlap with zero ; N= 382 (bootstrapping size 2000) ; OTE =Organization traditional leadership ; EE=Employee engagement ; GL=Green leadership			

Table 4: Direct and indirect effects and 95% confidence intervals

Conclusion	

12. Research Limitation:

i. Sample Size and Representativeness:

Limitation: The sample size may be limited due to resource constraints or accessibility to participants. Additionally, the sample may not fully represent the diversity of organizations and industries.

Impact: A smaller or less diverse sample may affect the generalizability of the findings to a broader population.

ii. Self-Report Bias:

Limitation: The data collected through survey questionnaires may be subject to self-report bias, as participants may provide socially desirable responses.

Impact: The accuracy of reported perceptions and behaviors may be influenced by social desirability, affecting the reliability of the data.

iii. Resource Constraints:

Limitation: Resource constraints may limit the scope and scale of your research, impacting the comprehensiveness of the study.

Impact: The study's capacity to collect extensive data or conduct in-depth case studies may be limited.

iv. Survey Instrument Limitations:

Limitation: The survey instruments used to measure Green Leadership, organizational sustainability, and employee satisfaction may have limitations in their validity and reliability.

Impact: The accuracy of data collected, and the strength of the relationships analyzed may be affected by the quality of the survey instruments.

14. Conclusion

In concluding the project on "The impact of green leadership on organizational sustainability at ARASCO," it becomes evident that the interplay between leadership practices and environmental stewardship significantly influences the organization's journey toward sustainability.

The study revealed a substantial acknowledgment of green leadership behaviors among employees, reflecting a positive alignment with ARASCO's commitment to sustainability. The considerable interest expressed by employees in participating in sustainability leadership roles underscores a potential for fostering a culture of environmental responsibility within the organization.

While the project showcased commendable aspects of green leadership, it also brought to light areas for improvement. The need for more consistent communication regarding sustainability goals and achievements was identified, emphasizing the importance of transparent and ongoing dialogue between leadership and employees.

The findings suggest that investments in training and education related to sustainability are integral, as they empower employees and contribute to the effective implementation of green initiatives. Moreover, the positive correlation between perceived green leadership practices and employees' inclination to take initiative in promoting sustainability highlights the influential role leadership plays in shaping organizational culture.

As ARASCO moves forward, the recommendations derived from this study aim to guide leadership in enhancing their green initiatives, with a focus on refining communication strategies, expanding educational opportunities, and further involving employees in sustainability decision-making processes.

In essence, the project underscores the vital role of green leadership in steering ARASCO toward a more sustainable future. By capitalizing on the positive aspects and addressing identified areas for improvement, ARASCO has the potential to not only meet but exceed its sustainability goals, setting a benchmark for environmentally conscious practices within the manufacturing sector. The project, therefore, stands as a foundational step towards fostering a culture of sustainability that aligns with the organization's vision and contributes to a more environmentally resilient future.

15. Appendix

15.1. Appendix A- survey questionnaire

Employee Survey					
Your opinion matters, I invite you to participate in the employee sustainability Perception Survey. Your insights will play a crucial role in shaping our organization's approach to sustainability and environmental responsibility.					
N#	Question				
1	How long have you worked at the organization?				
	Less than 1 year	1-2 years	3-5 years	6-10 years	More than 10 years
2	Have you observed specific green leadership behaviors in your organization (e.g., setting sustainability goals, promoting ethical decision-making, encouraging employee involvement in sustainability initiatives)?				
	Yes	NO			
3	How often does your organization provide training or education related to sustainability?				
	Regularly	Occasionally	Rarely	Never	
4	How frequently does your organization involve employees in sustainability-related decisions and initiatives?				
	Very rarely	Occasionally	Regularly	Frequently	Always
5	How well does your organization communicate its sustainability goals and achievements to employees?				
	Very poorly	Poorly	Adequately	Well	Very well
6	Do you feel that the Green Leadership practices of your superiors (e.g., managers, executives) inspire and engage employees in sustainability initiatives?				
	Strongly disagree	Disagree	Neutral	Agree	Strongly agree
7	How supported do you feel by your direct supervisor in contributing to sustainability initiatives within your organization?				
	Not supported at all	Somewhat supported	Moderately supported	Very supported	Extremely supported
8	Does your organization's leadership provide resources and incentives for employees to participate in sustainability activities?				

	Rarely	Occasionally	Regularly	Frequently	Always
9	In your opinion, how effective are your organization's sustainability initiatives in reducing waste and resource consumption?				
	Ineffective	Slightly effective	Moderately effective	Very effective	Highly effective
10	How would you rate the effectiveness of your organization's sustainability reporting and transparency in keeping employees informed about environmental performance and progress?				
	Very ineffective	Ineffective	Neutral	Effective	Very effective
11	Would you be interested in participating in sustainability leadership or champion roles within your organization if such opportunities were available?				
	Strongly disagree	Disagree	Neutral	Agree	Strongly agree
12	Do you feel that Green Leadership practices are essential for the future success and competitiveness of your organization?				
	Strongly disagree	Disagree	Neutral	Agree	Strongly agree

Abstract

The impact of green leadership on organizational sustainability at ARASCO explores the dynamic relationship between leadership practices, environmental consciousness, and sustainable outcomes within the prominent manufacturing organization.

The study employs a mixed-methods approach, integrating surveys to gauge employee perceptions and attitudes toward green leadership practices, alongside in-depth interviews with key organizational leaders. By focusing on ARASCO's manufacturing sector, the research aims to uncover specific instances of green leadership, ranging from setting sustainability goals to fostering employee involvement in environmentally responsible practices.

Through a comprehensive analysis of survey responses and qualitative data, the project seeks to identify the perceived effectiveness of ARASCO's current green leadership strategies and their impact on the organization's sustainability goals. Insights derived from employee perspectives and leadership narratives will contribute to a nuanced understanding of the interplay between leadership behaviors and the successful integration of sustainable practices within a manufacturing context.

The findings are expected to provide actionable recommendations for ARASCO's leadership to enhance their green initiatives, fostering a more sustainable organizational culture. Additionally, the project aims to contribute to the broader discourse on the role of leadership in steering environmentally responsible practices in the manufacturing sector, offering insights that may be applicable to similar industries locally.

الخلاصة

تأثير القيادة الخضراء على الاستدامة التنظيمية في أراسكو تستكشف العلاقة الديناميكية بين ممارسات القيادة والوعي البيئي والنتائج المستدامة داخل المنظمة البارزة في مجال التصنيع.

يستخدم البحث نهج الأساليب المختلطة، حيث يدمج استطلاعات لقياس تصورات الموظفين وأرائهم حول ممارسات القيادة الخضراء، جنباً إلى جنب مع مقابلات عميقة مع القادة التنظيميين الرئيسيين. من خلال التركيز على قطاع التصنيع في أراسكو، يهدف البحث إلى الكشف عن حالات محددة من القيادة الخضراء، بدءاً من وضع أهداف الاستدامة إلى تعزيز مشاركة الموظفين في ممارسات مسؤولة بيئياً.

من خلال تحليل شامل لردود الاستطلاع والبيانات الكيفية، يسعى المشروع إلى تحديد الفعالية المتصورة لاستراتيجيات القيادة الخضراء الحالية في أراسكو وتأثيرها على أهداف الاستدامة في المنظمة. ستسهم الرؤى المستمدة من آراء الموظفين وسرد القادة في فهم دقيق للتفاعل بين سلوكيات القيادة والتكامل الناجح للممارسات المستدامة داخل سياق التصنيع.

من المتوقع أن تقدم النتائج توصيات قابلة للتنفيذ لقادة أراسكو لتعزيز مبادراتهم الخضراء، وتعزيز ثقافة تنظيمية أكثر استدامة. بالإضافة إلى ذلك، يهدف المشروع إلى المساهمة في الحوار العام حول دور القيادة في توجيه ممارسات البيئة في قطاع التصنيع، مقدماً رؤى قد تكون قابلة للتطبيق على شركات أخرى محلية.
