Business Administration

The impact of corporate governance on investment confidence

Student name

Fahad Mahdi A AlSudani

Graduation Project – 1

Faculty of Management - Midocean University

Supervisor

Dr. Abdul Rahim Nader

Faculty member- Faculty of management- Midocean University

26/02/2026 – Final Semester

Table of Contents

1. Chapter One: Introduction

- 1.1 Background of the Study
- 1.2 Problem Statement
- 1.3 Research Questions
- 1.4 Research Objectives
- 1.5 Research Hypotheses
- 1.6 Significance of the Study
- 1.7 Scope and Delimitations
- 1.8 Definition of Key Terms

2. Chapter Two: Literature Review

- 2.1 Concept of Corporate Governance
- 2.2 Investment Confidence: Concept and Measures
- 2.3 Theoretical Foundations (Agency theory; investor protection perspective)
- 2.4 Corporate Governance Mechanisms
 - 2.4.1 Board Effectiveness and Independence
 - 2.4.2 Disclosure and Transparency
 - 2.4.3 Shareholder Rights and Minority Protection
 - 2.4.4 Control Environment and Risk Oversight
- 2.5 Empirical Evidence Linking Governance and Investor Outcomes
- 2.6 Research Gap and Conceptual Synthesis

3. Chapter Three: Conceptual Framework and Hypotheses Development

- 3.1 Conceptual Model
- 3.2 Hypotheses Justification
- 3.3 Variables Operational Definitions
- 3.4 Expected Contributions

4. Chapter Four: Research Methodology

- 4.1 Research Philosophy and Approach
- 4.2 Research Design
- 4.3 Population and Sampling
- 4.4 Data Sources / Survey Instrument
- 4.5 Measurement of Variables
- 4.6 Data Collection Procedures

- 4.7 Data Analysis Techniques (Regression/SEM)
- 4.8 Reliability, Validity, and Bias Control
- 4.9 Ethical Considerations
- 5. **Chapter Five: Data Analysis and Results**
 - 5.1 Descriptive Statistics
 - 5.2 Measurement Model Results (if SEM)
 - 5.3 Hypotheses Testing
 - 5.4 Mediation/Moderation Analysis
 - 5.5 Robustness Checks
- 6. **Chapter Six: Discussion**
 - 6.1 Interpretation of Findings
 - 6.2 Comparison with Prior Studies
 - 6.3 Theoretical Implications
 - 6.4 Practical Implications for Firms/Investors/Regulators
- 7. **Chapter Seven: Conclusion and Recommendations**
 - 7.1 Conclusion
 - 7.2 Recommendations
 - 7.3 Limitations
 - 7.4 Future Research Directions
- 8. **References list**

1. Chapter 1: Introduction

1.1. Introduction

Corporate governance refers to the framework of rules, practices, and institutional mechanisms through which corporations are directed and controlled, with the objective of ensuring accountability, transparency, and the protection of shareholders' and stakeholders' interests. In emerging markets, particularly in the context of Saudi Arabia, effective corporate governance plays a critical role in strengthening investor confidence, mitigating information asymmetry, and reducing agency-related risks. Consequently, examining the relationship between governance practices and investor confidence is essential, as sound governance structures contribute to lowering the cost of capital and enhancing the attractiveness of both domestic and foreign investment.

Accordingly, the core problem addressed in this study lies in the ambiguity surrounding the actual impact of corporate governance implementation on the level of investment confidence within the Saudi and Gulf business environment. Questions remain regarding the extent to which current governance practices can reassure investors, reduce investment-related risks, and enhance the sustainability of investments. Moreover, there is a need to empirically assess the relationship between key governance mechanisms such as transparency, disclosure, accountability, and the protection of investors' rights and investors' decision-making behavior and investment trends in local markets.

Therefore, this study seeks to bridge this gap by analyzing the impact of corporate governance on investment confidence. The findings are expected to provide valuable

empirical insights that may support policymakers and regulators in refining governance frameworks and strengthening the attractiveness of the investment environment in the Kingdom of Saudi Arabia and the GCC countries.

Research Questions

- A. How does corporate governance quality affect investment confidence?
- B. Which governance mechanisms most strongly influence investor confidence?
- C. Does disclosure and transparency mediate the governance–confidence relationship?
- D. Do firm characteristics moderate this relationship?

Research Objectives

- **To examine the direct effect** of corporate governance quality on investment confidence.
- **To decompose governance** into measurable dimensions (board effectiveness, transparency, shareholder rights, internal control/risk oversight) and identify the most influential drivers.
- **To test mediation** of disclosure/transparency in the governance–confidence link.
- **To test moderation** by firm characteristics (size, leverage, ownership concentration) that may strengthen or weaken governance signals to investors.

- **To offer practical recommendations** for firms and regulators to strengthen investor confidence via governance improvements aligned with international benchmarks.

Research Hypotheses

- **CGQ** = Corporate Governance Quality (a composite index or latent construct)
- **IC** = Investment Confidence (latent construct or proxy index)
- **DT** = Disclosure & Transparency
- **BE** = Board Effectiveness/Independence
- **SR** = Shareholder Rights/Minority Protection
- **CE** = Control Environment (risk management, internal audit, compliance)

Direct effects

H1: Corporate governance quality (**CGQ**) has a **positive** and significant effect on investment confidence (**IC**).

H1a: Board effectiveness (**BE**) positively affects investment confidence (**IC**). (Independent oversight is central to credible monitoring.)

H1b: Disclosure & transparency (**DT**) positively affects investment confidence (**IC**). (Improved disclosure reduces information risk.)

H1c: Shareholder rights/minority protection (**SR**) positively affects investment confidence (**IC**). (Stronger shareholder rights correlate with higher valuation/returns in classic studies.)

H1d: A stronger control environment (**CE**) positively affects investment confidence (**IC**). (Internal governance mechanisms are linked to investor confidence outcomes.)

Mediation

H2: Disclosure & transparency (**DT**) **mediates** the relationship between corporate governance quality (**CGQ**) and investment confidence (**IC**).

Moderation (examples you can test)

H3: The positive effect of **CGQ** → **IC** is stronger for firms with **higher ownership concentration** (where governance signals may be more valuable to outside investors).

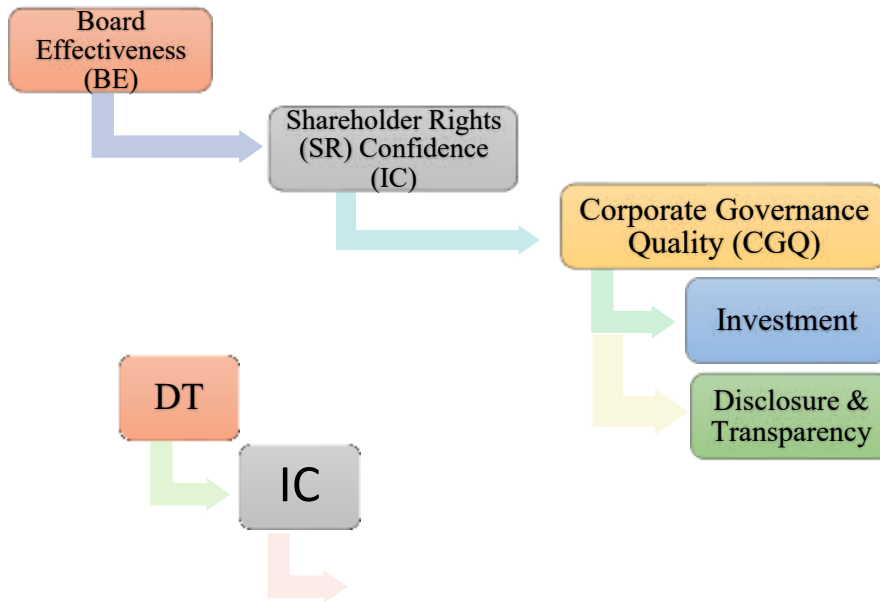

H4: The positive effect of **CGQ** → **IC** is stronger in firms with **higher leverage** (where risk oversight and transparency are more critical). (Aligned with governance–risk logic emphasized in governance frameworks.)

Research Model

5.1 Model description

This project models corporate governance quality as a multidimensional construct (board effectiveness, disclosure & transparency, shareholder rights, and control environment) that influences investment confidence directly and indirectly through transparency. This structure aligns with internationally used governance assessment frameworks emphasizing board structure, transparency/disclosure, shareholder rights, and control environment

5.2 ASCII conceptual diagram

(Mediator)

Controls: firm size, leverage, profitability, ownership concentration, industry effects

Moderators (optional): ownership concentration, leverage.

This reflects classic finance-governance evidence connecting shareholder rights and anti-entrenchment provisions to valuation/returns, and governance guidance emphasizing disclosure, board responsibilities, and investor protection as channels to financing and confidence.

Suggested Industry / Organization for the Empirical Study (brief)

Option A: Publicly listed logistics / transport / shipping-related firms (GCC / Saudi market)

This industry is well-suited because it is capital intensive, exposed to global risk, and relies on external financing, long-term contracts, and stakeholder trust conditions that elevate the importance of governance, risk oversight, and

transparency for investor confidence. These are the exact channels highlighted by major governance frameworks stressing access to capital, transparency, and board oversight.

We can select:

- Listed **logistics, ports, transportation, and supply-chain** firms (panel across multiple firms), or
- A focused segment (e.g., ports operators, freight/logistics, maritime services) to control industry heterogeneity.

Option B: A single organization case + market perception.

- If you must focus on one organization (e.g., a large logistics/shipping operator), you can study:
- Internal governance practices (board structure, audit/risk committee, compliance, reporting), mapped to recognized CG dimensions.
- External investor confidence signals using market/analyst proxies and stakeholder surveys (investors, lenders, institutional clients).

Note: A strictly “investment confidence” study is usually stronger with listed firms (because you can measure market-based confidence). Governance toolkits emphasize disclosure and transparency as key to bridging information gaps between firms and investors this can be operationalized cleanly in listed settings.

7) Research Methodology (brief, aligned to the project)

7.1 Research design

A **quantitative explanatory** design is recommended, testing hypothesized relationships between governance quality and investment confidence.

Two robust routes:

Route 1: Panel-data archival study (strongest for “investment confidence”)

- **Sample:** Listed companies within selected industry (e.g., logistics/transport) over 3–5 years.
- **Governance measures:** Construct a governance index based on public disclosures (annual reports, governance statements) using recognized dimensions (board, disclosure, shareholder rights, control environment).
- **Investment confidence proxies:** Tobin’s Q / valuation premium, stock liquidity, volatility-based risk perception, cost of equity proxy, abnormal returns around governance disclosures, etc. Classic studies demonstrate governance indices correlate with valuation/returns.
- **Analysis:** Panel regression (FE/RE), robustness checks, endogeneity controls (lagged governance, instrumental approaches if feasible).

Route 2: Survey-based SEM/PLS-SEM (best if confidence is perceptual)

- **Respondents:** Individual/institutional investors, analysts, lenders, or active market participants.
- **Instrument:** Likert-scale measures for governance dimensions and investment confidence (trust, perceived risk, willingness to invest).
- **Analysis:** PLS-SEM to test direct/mediated paths (CGQ → DT → IC).
- This aligns with evidence that governance mechanisms significantly impact investor confidence in survey contexts.

7.2 Measurement (example operationalization)

- **CGQ (latent or index):** items mapped to (BE, DT, SR, CE) consistent with governance frameworks.

- **DT:** timeliness, completeness, ESG/strategy/risk disclosure quality (consistent with disclosure toolkits).
- **IC:** perceived trust, perceived risk reduction, willingness to allocate funds, long-term commitment intentions.

7.3 Validity, reliability, and ethics (brief)

- Reliability: Cronbach's alpha / composite reliability (survey route).
- Validity: convergent/discriminate validity; common method bias checks.
- Ethics: informed consent, anonymity, secure data handling.

8) Suggested Structure for the Project (chapters)

1. **Introduction** (problem, gap, significance, scope)
2. **Literature Review** (theories + empirical evidence + conceptual definitions)
3. **Theoretical Framework and Hypotheses Development**
4. **Research Methodology** (design, sampling, measures, data sources, analysis plan)
5. **Data Analysis & Results** (descriptives, tests, robustness)
6. **Discussion** (interpretation, theoretical contribution, comparison with prior studies)
7. **Conclusion & Recommendations** (implications for firms/regulators/investors)
8. **Limitations & Future Research**

9. References

10. Appendices (survey, coding checklist, model outputs)

This format matches conventional governance research and allows clear linkage from governance frameworks to measurable constructs and outcomes.
