Primary Goal of this Course

- ❑ To outline the key features of project procurement and supply chain management.
- ❑ To understand the role of supply chain in project management.
- ❑ To understand how procurement adds value in project management.
- ❑ To identify the process overview and emerging project management techniques.
- ❑ To examine various success factors and how these impact on the procurement activity.
- ❑ To examine the issues project-planning chain and project-delivery chain.
- ❑ To appreciate the importance of procurement within project control.
- ❑ To appreciate the issues involved in contract & tendering management.
- ❑ To consider the various project changes including sources, impacts, mitigation, pricing, litigation, and excellence.

Learning Outcomes

At the end of the course, the students will be able to :

- Evaluate the role of supply-chain management in PM and identify the impact of tangible and intangible components of supply chains on the project's management and processes.
- Given a specific project context and plan, construct a procurement management plan to ensure the effective integration of supply-chain components throughout the project life cycle.
- Construct a procurement management plan that reflects the project's procurement needs.
- Analyze different types of contracts and the risks associated with each type of contract and determine contract incentives.

Credit Hours: 3 Credit Hours.
