Abstract:

Riyadh, the capital city of Saudi Arabia, has experienced rapid development in the past few decades due to various factors such as economic growth, urban planning policies, and social changes. This research aims to comprehend the reasons behind Riyadh's development, the impact of urban planning policies, the social and economic effects on communities, and the challenges faced in achieving sustainable and inclusive growth. The research will involve diverse methods such as surveys, data analysis, interviews, and case studies to identify the key factors that drive the city's development, evaluate the effectiveness of urban planning policies, analyze the socioeconomic impacts, and propose strategies for sustainable growth. The study hypothesizes that urban planning policies significantly contribute to Riyadh's development, while social dynamics impact the inclusivity and livability of neighborhoods. The proposed research model includes variables related to urban planning policies, economic indicators, social factors, and sustainability measures. Collaboration with the Riyadh Municipality, relevant government agencies, academic institutions, and community organizations will provide valuable insights into Riyadh's development. The study's findings are expected to contribute to understanding Riyadh's development process and inform policy decisions for sustainable urban development.

Chapter of Literature Review:

The rapid expansion of Riyadh city can be attributed to various factors such as economic growth, urban planning policies, and social changes. Many studies have highlighted the significant role of financial factors in driving the city's development. For instance, Al-Harthy and Al-Shayaa (2017) discovered that the city's attempts to diversify its economy have increased investment in infrastructure and construction projects, significantly contributing to its growth.

Urban planning policies have also played a critical role in shaping the development of Riyadh. According to Al-Sadhan (2018), the Riyadh Development Authority has implemented various urban planning strategies to manage the city's growth and improve its infrastructure. These policies have focused on enhancing transportation networks, developing public spaces, and promoting sustainable urban development practices.

The socioeconomic impact of Riyadh's development has also been a subject of study. Al-Qahtani et al. (2019) examined the effects of urbanization on Riyadh's communities and discovered that rapid urbanization has increased demand for housing, healthcare, and education services.

Despite the city's rapid development, Riyadh still needs to overcome several challenges, particularly regarding sustainability and inclusivity. Al-Mutairi and Al-Hokail (2020) highlighted the need for sustainable development practices in Riyadh to address environmental concerns and ensure the city's long-term prosperity.

Overall, the literature suggests that Riyadh's development is influenced by a complex interplay of economic, urban planning, and social factors. Developing strategies to promote sustainable and inclusive growth in Riyadh requires understanding key factors.

Conclusion:

The rapid development of Riyadh city has been influenced by various factors such as economic growth, urban planning policies, and social changes. Urban planning policies have played a vital role in shaping the development of Riyadh. The focus has been improving infrastructure, transportation networks, and public spaces. However, rapid urbanization has led to challenges, including an increased demand for housing and services.

To address these challenges, it is essential to implement sustainable development practices and promote inclusivity in Riyadh's neighborhoods. Collaboration between government agencies, academic institutions, and community organizations is crucial for developing strategies for sustainable growth in Riyadh. Understanding the drivers behind Riyadh's development and challenges, "I can assist policymakers in making informed decisions that will ensure long-term prosperity and livability for the city."
