(Discuss the relationship between Functions of Management and function of project)

(ناقش العلاقة بين وظائف الإدارة ووظائف المشروع)

Functions of Management in some forms or another is an integral part of living and is crucial wherever human efforts are to be undertaken to realize desired objectives. The fundamental ingredients of management are always at play, whether we manage our lives or business.

“Management could be a set of principles regarding the functions of coming up with, organizing, directing, and controlling, and also the applications of those principles in harnessing physical, financial, human, and informational resources efficiently and effectively to attain organizational goals.

Functions of Project Management: Project Management Body of information (PMBOK) consists of the nine management functions: Scope – Cost – Time - Human resource - Communication - Quality Contract/procurement – Risk - Project integration.

Managing Project Scope Project scope implies that the aims, goals, objectives and donor of the project should be defined.

Managing Project Cost How much funds are required to complete the activities and tasks of a project? Where will these funds come from? How they might be disbursed. The project manager should ensure to report all the prices and expenditures to then high management and donor.

Managing Project Time Time management refers to project planning, scheduling and controlling in order to realize the established goals objectives of the project. Time and price management are two key critical areas in project management, which may play as success consider a project.

Managing Human Resource, it refers to the administration and management of individuals involved in a very project. you have got to recruit highly qualified people then proper motivation and compensation should tend to them.

Managing Communications, it refers to the establishment of a system by which the data should flow smoothly through all members of the project.

Ad by Value impression Managing the standard It is important to ascertain quality standards for the project and so necessary steps should be taken to confirm that the goals and objectives are achieved.

Managing Contract and Procurement It includes selecting, negotiating and awarding orders and administrating procurement of fabric equipment's.

Managing Risk, it refers to handling the degree of uncertainty of the project through knowledge of and skill with the conditions.

Managing Project Integration, it ensures that the assorted functions and activities happening during a project should be integrated toward the identical goals and objectives.

Project integration is incredibly important to realize the goals and objectives; therefore, it requires special managerial and project management skills to integrate several functions of the project.

When these factors meet in the institution, it leads to the achievement, strengthening and strengthening of all aspects and serving them in a way that leads to the success of the institution, and avoiding falling into mistakes, disagreements and lack of understanding.
