Thank you for your submission

As long as you have provided a readable PDF file or a Microsoft Word or RTF document, along with a separate summary, we can begin the review process. Our commitment to give you a quick editorial decision begins from the date that we have received those elements.

Please verify that everything is accurate.
PDF documents, whether created by the author or by the system, should be checked, page by page, for accuracy.

Article Title	The role of the enterprise project management office in enhancing project management efficiency in Saudi organizations
Keywords	enterprise project management office (EPMO), project management efficiency, strategic planning, governance, Saudi Vision 2030
Disciplines	Business Administration, Management, and Operations
Abstract	The enterprise project management office (EPMO) has emerged as a strategic organizational unit that links project execution to enterprise-level strategy, moving beyond the operational, single-project focus of the traditional project management office (PMO). This study examines the role and importance of the EPMO in improving project management efficiency in organizations in the Kingdom of Saudi Arabia by testing the effect of an EPMD dimensions: strategic planning, governance, risk management, competency development, knowledge management, and performance monitoring - on project management efficiency. A descriptive-analytical design was adopted, and a structured questionnaire was administered to a stratified random sample of employees working in EPMDs in the government and private sectors. Of 400 distributed questionnaires, 364 valid responses were analyzed (91.0%) using SPSS, applying descriptive statistics, Cronbach's alpha, Pearson correlation, simple and multiple linear regression, t-tests, and one-way ANOVA. The results show a high level of EPMD implementation ($M = 4.05$) and a high level of project management efficiency ($M = 4.54$), and confirm a statistically significant positive effect of the combined EPMD dimensions on project management efficiency, explaining 78.1% of the variance. Strategic planning was the strongest predictor, followed by governance and performance monitoring, while risk management, knowledge management, and competency development also contributed significantly. The study recommends anchoring the EPMD directly under top management, aligning its mandate with Saudi Vision 2030, strengthening governance and knowledge-management infrastructure, and adopting Agile methodologies and key performance indicators to sustain enterprise-wide project efficiency.
