Monetary, and Fiscal Policy

After studying this chapter, you will be able to

- Describe the structure of the Federal Reserve System (the Fed), and the tools used by the Fed to conduct monetary policy
- Explain what an open market operation is, how it works, and how it changes the quantity of money
- Explain how the Fed influences interest rates
- Explain how the Fed's actions influence spending plans, real GDP, and the price level

After studying this chapter, you will be able to

- Understand what fiscal policy is and how it impacts the economy
- Apply fiscal policy to economic booms and busts to solve those issues effectively

1) Monetary Policy

The most important Federal Reserve monetary policy goal is achieving price level stability

Monetary Policy

Alteration of the money in circulation to influence the state of the economy

Who is Responsible for the Monetary Policy

A **CENTRAL BANK/ Federal Bank** is the public authority that regulates a nation's depository institutions and controls the quantity of money.

It is an independent authority in most of countries of the world

EUROPEAN CENTRAL BANK

Banc Ceannais na hÉireann
Central Bank of Ireland
Eurosysteem

Monetary policy affect money in circulation, and interest rate through 3 tools:

- 1) Discount Rate
- 2) Deposit Reserve
- 3) Open Market Operation

Tools monetary policy

1) Discount Rate (-Ve).

- **The discount rate** is the interest rate at which the Fed stands ready to lend reserves to depository institutions

Reducing the Discount Rate

A decrease in the discount rate makes banks more willing to borrow from the Fed. This causes banks to increase lending, causing the money supply to expand.

Increasing the Discount Rate

An increase in the discount rate makes banks less willing to borrow from the Fed. This causes banks to reduce lending in order to build reserves, causing the money supply to contract.

Tools monetary policy

2) Deposit Reserve (-Ve).

- **Required reserve ratio** are the total amount of reserves that banks are required to keep.
- **The Central banks** set the required reserve ratios, which are the minimum percentages of deposits that depository institutions must hold as reserves
- The higher RRR, the lower available loans for people, causing decrease in money supply, and increase in interest rate.

Tools monetary policy

3) Open Market Operation

- Open market operations are used mainly **to regulate the money supply** in an economy **by selling and buying government securities/ bonds** by the central bank of a nation

Tools monetary policy

3) Open Market Operation

To control **Recession**

- **increase the money supply**
- the equilibrium **interest rate decreases**
- people prefer to hold money (**sell bonds**)
- the central bank **buys** back bonds from commercial banks.

Tools monetary policy

3) Open Market Operation

To control **Expansion/ Inflation**

- **decrease the money supply**
- the equilibrium **interest rate increases**
- people prefer to hold bonds (**buy bonds**)
- the central bank **sells** bonds to commercial banks

Types of monetary policies:

**Expansionary
Monetary
Policy**

Helps speed up
the economy,
or increase
economic growth

**Contractionary
Monetary
Policy**

Helps slow down
the economy,
or slow economic
growth

1) Expansionary MP

At the time of **recession, and Unemployment**

1. CB buys bonds through open market operations
2. CB reduces discount rate
3. CB reduces RRR

Chapter 6

Monetary Policy

1) Contractionary MP

(b) Contractionary monetary policy

What is meant by monetary policy?

- A. The process by which the Parliament controls the money supply
- B. **The process by which the central bank or monetary authority of a country controls the supply of money**
- C. The process by which International Market controls the money supply
- D. None of the above

If interest rate decreases in an economy, it will

- A. Decrease the investment expenditure in the economy
- B. Increase the loan repayment by the government
- C. **Increase the consumption expenditure in the economy**
- D. Increase the total savings in the economy

If the economy experiences an expansionary gap and the Fed sells US government securities in the open market, then ____.

- A. money supply increases, investment increases, aggregate demand increases
- B. money supply increases, the interest rate increases, and the aggregate demand increases
- C. money supply decreases, the interest rate decreases, and the aggregate demand falls
- D. **money supply decreases, the investment decreases, and the aggregate demand decreases**

Which of the following is not a monetary policy instrument?

- A. Reserve requirement ratio.
- B. Interest on reserve. (Discount rate)
- C. **Capital gains tax rate.**
- D. Open market operations.

Which of the following is not one of the Fed's monetary policy tools?

- A. Buying bonds on the open market
- B. Selling bonds on the open market
- C. Raising or lowering taxes**
- D. Raising or lowering the reserve requirement ratio

An open market purchase by the Fed

- A. increases bank reserves, loans, and deposits, and thus increases the money supply.
- B. decreases bank reserves, loans, and deposits, and thus decreases the money supply.
- C. increases bank reserves, loans, and deposits, and thus decreases the money supply.
- D. decreases bank reserves, loans, and deposits, and thus increases the money supply.**

Suppose the Fed wanted to engage in an expansionary monetary policy. Which of the following should it do?

- A. Sell bonds on the open market.
- B. Increase the reserve requirement ratio.
- C. Increase the discount rate.
- D. **Buy bonds on the open market.**

Expansionary Monetary policy is a monetary policy designed to decrease activity in the economy.

A. True

B. **False**

- **False, Contractionary MP**

2) Fiscal Policy

- Fiscal Policy is determined by **government/ congress/ president (Fiscal Authorities)** using **Taxes and the government expenditure** to influence economic conditions
- **Goals:**
 - Boosting employment level to achieve Full Employment
 - Inflation in Check
 - Maintain Sustainable Growth

$$\text{Government Budget} \equiv G - T$$

- If Expenditure more than Revenue ($G > T$), **Budget Deficit**,
- If Expenditure less than Revenue $G < T$, there would be a **Budget surplus**
- If Expenditure equals Revenue $G = T$, there would be a **Budget balance**

Types of Fiscal policy

	Expansionary fiscal policy
When	Stimulate the economy during <u>the recession</u> (during Budget surplus)
Action	$T \downarrow$ or $G \uparrow$
results	$T \downarrow$: consumer spending $\uparrow$ $G \uparrow$: Business investment $\uparrow$ AD curve <u>increases and shift to the right</u>
effect	Real GDP $\uparrow$ Price level $\uparrow$ Employment $\uparrow$

1) Expansionary FP

	Contractionary fiscal policy
When	Stimulate the economy during <u>inflation</u> (during <u>Budget Deficit</u>)
Action	$T \uparrow$ or $G \downarrow$
results	$T \uparrow$: consumer spending $\downarrow$ $G \downarrow$: Business investment $\downarrow$ AD curve <u>decreases and shift to the left</u>
effect	Real GDP $\downarrow$ Price level $\downarrow$ Employment $\downarrow$

2) Contractionary FP

----- is known as the policies that fiscal authorities adopt

- A. Public policy
- B. **Fiscal policy**
- C. Government policies
- D. None of the above

Fiscal policy is defined as the policy under which

- A. The government uses instruments of taxation
- B. The government uses instruments of Government spending
- C. Government has a predetermined purpose of economic policy
- D. **All of the above**

Which of the following are the tools of fiscal policy?

- A. **Taxation**
- B. Government research
- C. Government borrowing
- D. None of the above

Which of the following objectives are achieved by fiscal policy?

- A. Economic stability
- B. Achieving high level of employment
- C. Accelerating economic growth
- D. **All of the above**

Budget is an instrument of

- A. Monetary policy of the government
- B. Commercial policy of the government
- C. **Fiscal policy of the government**
- D. Money-saving policy of the government

Fiscal policy creates a surplus, when the total-----

- A. Expenditure and total receipts same
- B. **Receipts more than Expenditure**
- C. Expenditure over Receipts
- D. Receipts and total Expenditure very low

When the governments total revenue is less than the planned expenditure, it is called----

- A. Revenue deficit
- B. Budget shortfall
- C. **Fiscal deficit**
- D. Deficit financing

Summary outlines

- **Monetary policy (definition, tools, expansionary, and monetary policy)**
- **Fiscal policy (definition, tools, expansionary, and fiscal policy)**
