Abstract

The Corona pandemic has had a significant impact on the global economy, leading to a decline in economic activities and growth rates. The purpose of this research is to explore the impact of the Corona pandemic on the global economy, using a comprehensive analysis of the past, present, and future economic trends. This study will also examine the measures taken by governments, central banks, and other economic actors to mitigate the economic impact of the pandemic.

Introduction

The Corona pandemic, which started in late 2019, has brought unprecedented changes to the global economy. The pandemic has led to a decline in economic activities, business closures, and loss of jobs. As a result, governments and central banks have had to take extraordinary measures to mitigate the economic impact of the pandemic. This research plan aims to investigate the impact of the Corona pandemic on the global economy and the measures taken by governments, central banks, and other economic actors to reduce the impact of the pandemic.

Objectives:

The main objectives of this research are as follows:

To analyze the impact of the Corona pandemic on the global economy

To examine the measures taken by governments, central banks, and other economic actors to mitigate the economic impact of the pandemic.

To evaluate the effectiveness of these measures in addressing the economic impact of the pandemic to predict the future economic trends and the impact of the pandemic on the global economy in the long term.

Research Questions:

What is the impact of the Corona pandemic on the global economy?

How have governments, central banks, and other economic actors responded to the economic impact of the pandemic?

What is the effectiveness of the measures taken by governments, central banks, and other economic actors in addressing the economic impact of the pandemic?

What are the long-term economic trends and the impact of the pandemic on the global economy?

Methodology:

This research plan will use a qualitative research approach, with data collected from secondary sources such as academic journals, government reports, and news articles. The data will be analyzed using content analysis and thematic analysis. The research will also use a comparative analysis of the economic trends before and after the pandemic, to evaluate the impact of the pandemic on the global economy.

Data Analysis:

The data collected from the secondary sources will be analyzed. Content analysis involves identifying patterns, themes, and concepts in the data. Thematic analysis, on the other hand, involves identifying patterns and themes that emerge from the data. The analysis will be conducted using software.

Expected Outcomes:

The research is expected to provide the following outcomes:

A comprehensive analysis of the impact of the Corona pandemic on the global economy

An evaluation of the measures taken by governments, central banks, and other economic actors to reduce the impact of the pandemic.

An assessment of the effectiveness of these measures in addressing the economic impact of the pandemic.

A prediction of the future economic trends and the impact of the pandemic on the global economy in the long term.

Conclusion

In conclusion, the Corona pandemic has had a significant impact on the global economy, leading to a decline in economic activities and growth rates. The measures taken by governments, central banks, and other economic actors to mitigate the economic impact of the pandemic have been unprecedented. This research plan aims to investigate the impact of the Corona pandemic on the global economy, using a comprehensive analysis of the past, present, and future economic trends. The research is expected to provide a better understanding of the impact of the pandemic on the global economy and the effectiveness of the measures taken to reduce its impact.
