The retaliation ship between Functions of Management and functions of project

1- The functions of management are:

While most positions and departments within a business are tasked with specific duties based on particular knowledge, expertise, or company needs, managers can have a broader and more complex set of responsibilities. More than just specialized knowledge, management requires an ability to navigate numerous procedural, structural, and interpersonal challenges in the process of guiding one's team to the completion of various goals.

Originally identified by Henri Fayol as five elements, there are now four commonly accepted functions of management that encompass these necessary skills: planning, organizing, leading, and controlling.¹ Consider what each of these functions entails, as well as how each may look in action.

According to lecture no.2 c chapter no. 1 page no.3, there are four functions which are:

- 1- Planning**
- 2- Organizing**
- 3- Leading**
- 4- Controlling**

2- The functions of Projects management are:

Project management brings together and optimizes the resources necessary to complete the project successfully.

Olsen has defined project management as “..... the application of a collection of tools and techniques (such as CPM and Matrix Organization) to direct the use of diverse resources towards the accomplishment of a unique, complex, one-time task within time, Cost and quality constraints. Each task requires a particular mix of these tools and techniques structured to fit the task-environment and life-cycle (from conception to completion) of the task”.

According to lecture on. 2 chapter no.1 page no.6, there are four functions which are:

- 1- Product**
- 2- Marketing**
- 3- Human resources**
- 4- Finance**
