# Differentiation

$f'(x)$  “f prime of x”

Remember that

$y'$  “y prime”

$\frac{dy}{dx}$  “the derivative of y with respect to x”

$\frac{d}{dx}$  is a verb. “Take the derivative with respect to x...”

# Differentiation

Remember that

- Differentiation is the process of computing the derivative of a function.

You may be asked to:

- Differentiate.
- Derive.
- Find the derivative of...

# Differentiation

Remember that

$$\frac{d}{dx}[c] = 0, \quad c \text{ is a constant}$$

The derivative of a constant function is zero.

# Differentiation

Remember that

$$\frac{d}{dx}[x^N] = Nx^{N-1}, \quad N \text{ is any real number}$$

$$\frac{d}{dx}[x] = 1$$

Remember that

$$\frac{d}{dx}[c (f (x))] = c (f '(x)), \quad c \text{ is a constant}$$

- The derivative of a constant times a function is equal to the constant times the derivative of the function.

# Differentiation

Remember that

$$\frac{d}{dx}[f(x) + g(x)] = f'(x) + g'(x)$$

*The derivative of a sum is the sum of the derivatives.*

$$\frac{d}{dx}[f(x) - g(x)] = f'(x) - g'(x)$$

*The derivative of a difference is the difference of the derivatives.*

# Differentiation

Remember that

The derivative of the product of two differentiable functions is given by

$$y = f(x) \cdot g(x)$$

$$\frac{dy}{dx} = y' = f'(x) \cdot g(x) + f(x) \cdot g'(x)$$

$$\frac{dy}{dx} = y' = f' \cdot g + f \cdot g'$$

# Differentiation

Remember that

- The derivative of the quotient of two differentiable functions is given by

$$\frac{d}{dx} \left[ \frac{f(x)}{g(x)} \right] = \frac{g(x)f'(x) - f(x)g'(x)}{[g(x)]^2} \quad (g(x) \neq 0)$$

# Integration and Applications
