

Literary Criticism RCS813 - Assignment 3

Prepared by
Abdulaziz Alarfaj

Research Title

Assignment : Critique of Research Paper in Terms of

Research Problem/Problem Statement

Research Questions

Article Chosen :

Attributes impacting cybersecurity policy development: An evidence from seven nations

Published in 2022

Clarity of the Research Problem: مشكلة البحث ووضوحها

Strengths:

The research problem is clear and revolves around the lack of comprehensive cybersecurity policies that effectively address cyber threats in many nations.

The research highlights the challenges arising from the heterogeneity of policies across nations, making it difficult for governments and organizations to adapt.

The gaps in previous literature are identified, such as the lack of comprehensive studies comparing cybersecurity policies across multiple nations.

Weaknesses:

The research problem is not sufficiently detailed in terms of practical implications, such as how these gaps impact national security or the economy.

The consequences of the lack of comprehensive policies are not thoroughly explained, such as increased cyberattacks or loss of sensitive data.

Formulation of Research Questions: تساؤلات البحث

Strengths:

The main research question, "How do different nations implement CS policies to address critical CS attributes?" is clear and directly related to the research problem.

The question reflects the main objective of the research, which is to understand how nations address key cybersecurity attributes.

Weaknesses:

The research does not include sub-questions to support the main question, such as:

What are the most impactful attributes in cybersecurity policies?

How do nations prioritize these attributes differently?

What factors influence the effectiveness of cybersecurity policies?

The absence of sub-questions makes the research appear broad and unfocused on specific aspects that need exploration.

**Relevance of Research Questions to the Research Problem: علاقة مشكلة البحث
بتساؤلاته**

Strengths:

The main research question is closely tied to the research problem, as it seeks to understand how nations address cyber threats through their policies.

The research aims to fill gaps in previous literature by providing a comparative analysis of cybersecurity policies.

Weaknesses:

The main research question is too broad and does not focus on specific aspects, such as the impact of certain policies on reducing cyberattacks or improving privacy.

Summary - ملخص

Strengths: The research problem is clear and addresses global challenges in cybersecurity, and the main research question reflects the primary objective of the study.

Weaknesses: The research needs sub-questions to support the main question and a clearer explanation of the practical implications of the research problem.

Suggested Improvements: Narrow the scope of the research, include sub-questions, and clarify the practical implications of the research problem.
