1. Chapter 1: Introduction

1.1. Research Background

In recent times, employee retention is one of the leading challenges for organizations in constantly changing environment where a lot of opportunities pops up. Retaining key employees is one of the most important strategies that maintain the company's efficiency and the implementation of tasks to the fullest extent, especially employees with long-term experience. The departure of a loyal employee from the company may cause huge losses. A solution will mean more profitable and effective organizations, happier and more productive employees, and more satisfied client/ customers.

For most companies, it is important to retain employees to build a cohesive work team in the work place so workers can trust and depend on each other. Diminished productivity and competitive advantage are among the biggest losses when talented employees leave an organization. High employee turnover rates can harm an organization's ability to carry out its mission due to impairments to continuity, loss of institutional knowledge, and the high costs of replacing departing workers and training new replacements. Employee departures can also lower morale and prompt more employees to leave the organization.

(Kaye and Jordan-Evans 2001, pp. 06) in their book (Retaining Key Employee) shared a study that says “Studies have found that the cost of replacing lost talent is 70 to 200 percent of each lost employee's annual salary. There are advertising and recruiting expenses, orientation and training of the new employee, decreased productivity until the new employee is up to speed, and loss of those customers, clients, or citizens who were loyal to the departing employee. Finding, recruiting, and training the best employees represent major investments. Once an organization has captured talented people, its best return on investment (ROI) requires closing the back door to prevent them from walking out” (1).

The reasons for losing valuable employees may be:

The presence of another very attractive opportunity that is compatible with your values, goals, and professional priorities, whether for financial, developmental, or other reasons, in a way that is compatible with your professional plan.

Dissatisfaction in the current workplace for many reasons, including: the nature of the job, the work environment, financial income, or lack of professional satisfaction

Stop personal development and learning in the organization you work for

Lack of opportunities for promotion and professional advancement despite your excellent performance and continuous development, and the inability to do so within the targeted time frame.

Not tolerating work pressures despite trying to organize and control them

There is a lack of compatibility between you and management and its orientations or methods in a way that affects you and the work

Changing your career path for well-thought-out and clear reasons

This study aims to address this gap by investigating the impact of effective management practices on the retention of experienced employees. By examining managerial behaviors, strategies, and interventions that have been theorized or empirically linked to retention outcomes, this research seeks to provide actionable insights for organizational leaders and human resource practitioners. Through a comprehensive review of relevant literature and primary data collection from [Sugar n Spices Catering], this study endeavors to enhance theoretical understanding and offer practical recommendations to optimize the retention of experienced talent.

By delving into the relationship between management practices and employee retention, this research contributes to scientific knowledge while offering solutions to enhance organizational effectiveness and sustainability.

1.2. Research Problem

Despite acknowledgment of the importance of effective management in employee retention, there remains a gap in understanding how specific managerial practices and strategies contribute to the retention of experienced employees in organizations

1.2.1. Theoretical Gaps

There could be a gap in understanding how effective management practices contribute to factors such as job satisfaction, organizational commitment, and psychological well-being, which are crucial for retaining experienced employees.

1.2.2. Practical Gaps

There may be a gap in how organizations measure and evaluate the impact of management practices on employee retention, particularly concerning experienced employees. Lack of firm metrics or feedback mechanisms can hinder the ability to assess effectiveness and make informed adjustments.

The main research question: How can an effective manager help the organization measure and evaluate the impact of management practices on employee retention?

1.3. Research Significance

Theoretical and empirical significance of this research lies in its potential to bridge existing gaps and contribute to the advancement of effective management practices

1.3.1. At the theoretical level

To overcome the theoretical gap mentioned above, an effective manager can increase employee retention by following up specific strategies in a company and does constant monitoring for the performance reports. This keeps the manager up to date with the psychological employee well-being state and the environment in which the employee is operating.

1.3.2. At the practical level

Understanding the impact of effective management practices on retaining experienced employees holds significant practical implications for organizations aiming to enhance workforce stability, productivity and competitive advantage. Effective management practices that foster a firm metrics or feedback mechanisms for the retention of experienced employees contribute to a greater organizational stability and continuity. Retaining employees with extensive organizational knowledge and expertise helps mitigate knowledge loss, maintain operational efficiency and sustain a cohesive organizational culture.

1.4. Research Questions

1.5. Research Objectives

1.6. Research Hypotheses

1.7. Research Model

1.8. Research Methodology

1.9. Scope of The Study

1.10. The Suggested Project Structure

2.Chapter 2: Literature Review

2.1. Introduction

Brief introduction for the chapter

2.2. The independent variable

2.3. The dependent variable

2.4. The relationship between the independent and the dependent variables

2.5. Conclusion
