

```
def add_binary(a: str, b: str) -> str:  
    return bin(int(a, 2) + int(b, 2))[2:]
```

Example usage:

```
print(add_binary("11", "1")) # Output: "100"
```

```
print(add_binary("1010", "1011")) # Output: "10101"
```
