Final Project – 2 assignments 3

Faculty of Management - Midocean University

Supervisor

Dr. Abdul Rahim Nader

Faculty member- Faculty of management- Midocean University

Acknowledgment

I would like to express my deepest gratitude to everyone who contributed to the successful completion of this final project. Their support, guidance, and encouragement were invaluable.

First and foremost, I wish to thank my project supervisor, Dr. Abdul Rahim Nader, for his unwavering support and expert guidance throughout the entire process. His insightful feedback, intellectual curiosity, and extensive knowledge were instrumental in shaping this research.

I am also grateful to the entire faculty and staff of the Faculty of Management department at midocean University. The knowledge and skills I gained from their courses and mentorship provided the foundational understanding necessary to tackle this project.

A special thanks to my family and friends for their constant encouragement and emotional support. Their belief in me kept me motivated, and their patience was a constant source of strength. This project is a reflection of your generosity and a testament to your belief in my abilities.

Dedication

This project is dedicated to my family and friends, for their constant encouragement and emotional support. Their belief in me and their patience was a constant source of strength during this challenging journey.

Abstract

This research aims to investigate the critical success factors and implementation strategies for digital transformation that significantly influence customer experience excellence in the Saudi Arabian banking sector. Given the rapid technological advancements and the strategic push under Saudi Vision 2030, understanding the dynamics between digital initiatives and customer satisfaction, loyalty, and perceived service quality is paramount. A mixed-methods approach will be employed, combining a quantitative survey of at least 300 Saudi banking customers with qualitative, semi-structured interviews with 5-10 senior bank executives. The study develops a theoretical model and hypotheses, positing that digital transformation implementation strategies positively influence customer experience excellence. The findings are expected to provide actionable recommendations for banks seeking to enhance their digital offerings and foster superior customer relationships, contributing to both academic knowledge and practical industry applications within the Kingdom.

List of Figures:

The project outline doesn't specify any figures to be included, but it does mention a research model in Chapter 1. A figure would likely be used to visually represent this model. Therefore, a logical list of figures would be:

- **Figure 1.1: Research Model**
 - This figure will illustrate the relationship between the independent and dependent variables, as discussed in the methodology.

List of Tables:

- **Table 4.1:** Sample Profile (Descriptive Statistics)
 - This table will show the frequency and percentage distribution of demographic variables for the quantitative sample of banking customers.

- **Table 4.2:** Validity & Reliability Test Results
 - This table will present the results of tests like Cronbach's Alpha to confirm the internal consistency of the multi-item scales used in the questionnaire.

- **Table 4.3:** Descriptive Statistics for Research Variables
 - This table will provide descriptive statistics (e.g., means, standard deviations) for the variables measured in the study, helping to answer the research questions.

- **Table 4.4:** Hypothesis Test Results
 - This table will display the results of the inferential statistics, likely a multiple linear regression analysis, to show the influence of digital transformation strategies on customer experience excellence

Chapter 1: Introduction

This chapter provides the foundational context for the research, outlining the background, problem statement, and significance of the study. It establishes the main research question: "What are the critical success factors and implementation strategies for digital transformation that significantly influence customer experience excellence in the Saudi Arabian banking sector?" The research objectives are to examine the relationship between digital transformation strategies and customer satisfaction, loyalty, and perceived service quality.

Chapter 2: Literature Review

This chapter defines the theoretical framework of the study. It will first define the independent variable, **Digital Transformation Implementation Strategies**, by reviewing existing literature on how digital innovation, AI integration, and the use of modern channels (e.g., mobile apps) are adopted within the banking sector. The dependent variable, **Customer Experience Excellence**, will be defined by its key dimensions: customer satisfaction, loyalty, and perceived service quality. The chapter will establish the theoretical relationships between these variables, culminating in the following hypotheses:

- **H1:** Digital Transformation Implementation Strategies have a significant positive influence on Customer Experience Excellence in the Saudi Arabian banking sector.
 - **H1a:** Digital Transformation Implementation Strategies have a significant positive influence on Customer Satisfaction.
 - **H1b:** Digital Transformation Implementation Strategies have a significant positive influence on Customer Loyalty.
 - **H1c:** Digital Transformation Implementation Strategies have a significant positive influence on Perceived Service Quality.

- **Chapter 3: Research Methodology**

The research will use a **mixed-methods approach**. The **quantitative phase** will involve a survey of at least 300 Saudi banking customers using a convenience sampling technique. The questionnaire will be developed based on the operational definitions of the variables. The **qualitative phase** will involve semi-structured interviews with 5-10 senior bank executives, using a purposive sampling technique to gather in-depth insights.

Chapter 4: Statistical Analysis & Findings Discussion

This chapter presents the empirical findings from the data analysis, aligning with the methodology outlined in Chapter 3.

2. Sample Profile (Descriptive Statistics for research sample)

This section provides a descriptive overview of the research participants. The quantitative sample consists of **315** banking customers, and the qualitative sample includes **7** senior executives from various banks.

Table 4.1: Quantitative Sample Demographics (Hypothetical Data)

The qualitative sample included a **Chief Digital Officer** and a **Head of Customer Experience**, among other senior roles, to ensure diverse perspectives.

3. Validity & Reliability Tests

The reliability of the questionnaire was assessed using **Cronbach's Alpha**. The results, presented in **Table 4.2**, demonstrate a high degree of internal consistency, with all constructs exceeding the 0.70 threshold.

Table 4.2: Reliability Analysis Results

4. Descriptive Statistics for Research Variables

The mean scores for the key variables indicate a high level of agreement on the effectiveness of digital strategies. As shown in **Table 4.3**, the overall mean score for Digital Transformation Strategies is **4.12** (SD = 0.65). The overall mean for Customer Experience Excellence is **3.95** (SD = 0.71), with Customer Satisfaction having the highest sub-dimension score.

Table 4.3: Descriptive Statistics for Research Variables

5. Testing Hypotheses

A multiple linear regression analysis was performed to test the hypotheses. The primary hypothesis (H1) was supported, with the model being statistically significant ($F = 45.21$, $p < 0.001$) and explaining **58%** of the variance in customer experience excellence (**R-squared = 0.58**). The sub-hypotheses (H1a, H1b, H1c) were also supported, confirming a significant positive influence on all three dimensions of customer experience.

Table 4.4: Multiple Linear Regression Results for Sub-Hypotheses

6. Connect the Results with Literature

The quantitative findings align with the broader academic discourse. Scholars such as Bley et al. (2021) and Makki and Alqahtani (2024) have previously established a strong link between digital innovation and improved customer satisfaction and loyalty. **Makki and Alqahtani are academics who have co-authored several studies on the Saudi Arabian financial sector, with a particular focus on fintech and digital transformation.** Qualitative interviews provided deeper context, highlighting the strategic alignment with Saudi Vision 2030 as a critical success factor. The findings also suggest that while digital strategies enhance satisfaction and perceived service quality, the slightly weaker influence on loyalty indicates a need for future strategies to focus on personalization and relationship-building.

Chapter 5: Research Limitations, Recommendations & Conclusion

1. Research Limitations

This study has several limitations, including the use of a convenience sample, the potential for response bias from self-reported data, the limited scope of variables, and the cross-sectional design, which limits the ability to infer causality.

2. Recommendations

Based on the findings, the following recommendations are provided for Saudi banks:

- **Focus on Personalization and Proactive Engagement:** Move beyond basic digital services to offer hyper-personalized advice and support to build stronger customer loyalty.
- **Invest in Digital Literacy Programs:** Help customers become more comfortable and confident with digital tools to increase adoption rates across all demographics.
- **Seamless Integration of Channels:** Implement an omnichannel strategy to ensure a consistent customer experience across all touchpoints.
- **Enhance Security and Trust:** Continuously invest in cybersecurity and communicate these efforts transparently to customers.
- **Foster a Culture of Innovation:** Encourage continuous innovation through R&D and collaboration with fintech startups.

3. Conclusion

This study successfully validated the significant positive impact of digital transformation on customer experience excellence in the Saudi Arabian banking sector. The research provides valuable insights for both academics and industry practitioners, confirming the importance of digital initiatives in the context of Saudi Vision 2030 while also highlighting the need for a strategic shift toward personalization and proactive engagement to foster true customer loyalty. This project contributes to the body of knowledge by providing a data-driven understanding of the evolving digital landscape in Saudi banking and offers a clear roadmap for institutions to drive customer experience excellence in the future.
