Research Title

Assignment : Critique of Research Paper in Terms of
Research Objectives

Article Chosen :

Cybersecurity Enterprises Policies: A Comparative Study

Published in 2022

Clarity of Objectives: وضوح الأهداف

Clarity of Objectives: The objectives are not explicitly stated as a separate section but are embedded within the research questions (RQ1 and RQ2), which aim to identify common aspects of cybersecurity policies across different enterprises and how they are applied. It would be better to present the objectives clearly and explicitly at the beginning of the paper.

Measurability: قابلية القياس

The objectives rely on a literature review rather than empirical studies or quantitative analysis, making their assessment somewhat subjective. Including measurable criteria for evaluating cybersecurity policies would enhance the study's rigor.

Alignment with Research Outcomes: ارتباط الأهداف بنتائج البحث

The study meets its objectives by comparing cybersecurity policies across different industries (healthcare, finance, aviation, education, and e-commerce). However, it lacks an in-depth analysis of how these policies can be improved or recommendations for best practices in each sector.

Practical Relevance: الأهمية العملية

The research objectives focus on understanding cybersecurity policies comparatively but do not clearly outline how the findings can be applied in real-world scenarios to enhance cybersecurity in organizations.

Scope of Research: نطاق البحث

The study is limited to five sectors, which restricts the generalizability of its findings. The objectives could be improved by explicitly stating that the study focuses on these specific industries while acknowledging the potential for future expansion

Suggestions for Improvement: اقتراحات للتحسين

Include a clearly defined section for research objectives in the introduction, stated in a measurable and specific manner.

Clarify how the objectives will be achieved through the chosen methodology.

Provide a deeper analysis of how the research findings can be applied practically.

Expand the study to cover additional sectors or justify the selection of the current sectors more explicitly.
